Ha, 2010-10-28 Providing the underlying principles of digital communication and the design techniques of real world systems this textbook prepares senior undergraduate and graduate students for the engineering practices required in industry Covering the core concepts including modulation demodulation equalization and channel coding it provides step by step mathematical derivations to aid understanding of background material In addition to describing the basic theory the principles of system and subsystem design are introduced enabling students to visualize the intricate connections between subsystems and understand how each aspect of the design supports the overall goal of achieving reliable communications Throughout the book theories are linked to practical applications with over 250 real world examples whilst 370 varied homework problems in three levels of difficulty enhance and extend the text material With this textbook students can understand how digital communication systems operate in the real world learn how to design subsystems and evaluate end to end performance with ease and confidence Digital Communication Systems Engineering with Software-defined Radio Di Pu, Alexander M. Wyglinski, 2013 For a senior level undergraduate course on digital

communications this unique resource provides you with a practical approach to quickly learning the software defined radio concepts you need to know for your work in the field **Analog and Digital Communications** Sudakshina Kundu, 2010-06 Analog and Digital Communications will help students irrespective of their level of study to grasp the fundamental aspects of electronic communication by starting from the basics and working up the rungs gradually and in a structured form The book is designed to make a student think consistently and grasp the concepts in steps to ensure understanding and retention The coverage of fundamental ideas allows the student to easily learn the future developments that come up in these areas

Transceiver and System Design for Digital Communications Scott R. Bullock, 2017 In this 5th Edition the author continues to evaluate various novel techniques and design methods for the modulation and transmission of digital data allowing the

readers to gain a firm understanding of the processes needed to effectively design wireless data link communication systems

Modern Digital and Analog Communication Systems Bhagwandas Pannalal Lathi, Zhi Ding, 2019 As engineering students become more and more aware of the important role that communication systems play in modern society they are increasingly motivated to learn through experimenting with solid illustrative examples To captivate students attention and stimulate their imaginations Modern Digital and Analog Communication Fifth Edition places strong emphasis on connecting fundamental concepts of communication theory to students daily experiences of communication technologies The text provides highly relevant information on the operation and features of wireless cellular systems Wi Fi access broadband Internet services and more

An Introduction to Digital Communications Jack Kurzweil, 2000 The only book available that integrates a realistic design approach with a theoretical approach This outstanding new book focuses on the central theoretical and practical issues involved in modem design The first half deals with the basic issues of base band and passband data transmission and contains descriptions of applications to specific digital transmission systems The second half specifically addresses design issues including timing and carrier recovery channel characterization adaptive equalization and trellis coding The author uses simulation programs in Matlab and C to help readers Determine the power spectral density of complex data encoding rules Simulate the performance of passband data transmission techniques Design and assess the performance of carrier recovery systems Develop time domain models for a variety of channels Design and assess the performance of adaptive equalizers Use existing programs as the framework for creating simulation modules
