

13.3.2 Toner Cartridge life control

A. Toner Cartridge detection/New unit detection timing

- Detection is controlled by confirming the data of each unit with access to TC EEPROM board when the front door is closed.
- Based on the data, the machine confirms if the cartridge is mounted or not.
- After detecting the presence of the cartridge, with the data machine checks if the cartridge is new or not.

B. Toner Empty detection control

- A toner empty condition can be divided into 3 groups: Normal, Near-Empty, Empty
- Normal: Available number of copy is 1K or more.
- Near-Empty: Available number of copy is under 1K.
- Empty: Toner remaining level is 0.

C. Toner Near-Empty detection control

- When new toner is set, toner remaining level is set to TC EEPROM board. Based on the remaining level, the machine calculates and gives subtraction of the toner replenishing amount from the hours which the toner replenishing motor has turned. When the level reaches the given amount of toner remaining, Toner Near-Empty warning is displayed.

D. Toner Empty control

- After a near-empty condition is detected, the toner density detected by the TCR sensor, at every T/C ratio detection timing, is compared with the target toner density to calculate the density difference. The count number defined according to each density difference is added, and when the value reaches the given level, Toner Empty warning is displayed.

- A different toner empty screen is displayed if "User" is selected for "Unit Change" available from the Tech. Rep. mode.
