

1. This manual contains important safety and operating instructions.

2. Before using battery charger, read all instructions and cautionary markings on (1) battery charger, (2) battery pack, and (3) product using battery pack.

3. **CAUTION:** To avoid injury, use only the correct Charger Battery Packs.

4. Other types of batteries may burst causing personal injury and damage.

5. Do not expose charger to rain or snow.

6. Use of an attachment not recommended or sold by Black & Decker may result in a risk of fire, electric shock, or injury to persons.

7. To reduce risk of damage to electric plug and cord, pull by plug rather than cord when disconnecting charger.

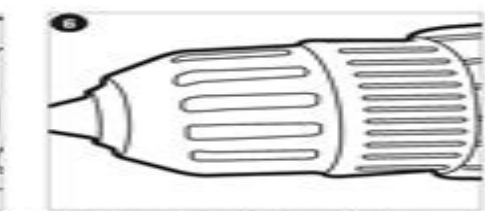

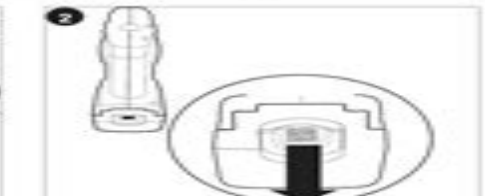

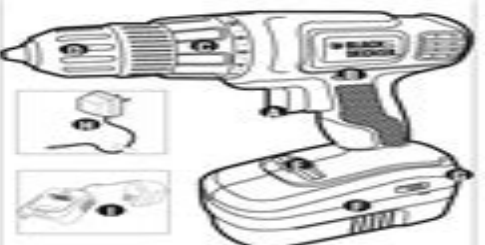

8. Make sure cord is located so that it will not be stepped on, tripped over, or otherwise subjected to damage or stress.

9. An extension cord should not be used unless absolutely necessary. Use of improper extension cord could result in a risk of fire, electric shock or electrocution.

10. Two-wire cords can be used with 2-wire or 3-wire extension cords. Only round jacketed extension cords should be used. See UL listing or Underwriters Laboratories (U.L.). If the extension is to be used outside, the cord must be suitable for outdoor use. Any cord marked for outdoor use can also be used for indoor use when the label "W" or "WA" on the cord jacket indicate that the cord is suitable for outdoor use.

11. An extension cord must have adequate wire size (AWG or American Wire Gauge) for safety, and prevent overheating and overheating. The gauge number. The smaller the gauge, the capacity of the cord is less. Use a 16 gauge cord for more capacity than 18 gauge. When using more than one extension to make up the total length, be sure

10. Use only the supplied charger when charging your drill. The use of any other charger could damage the drill or create a hazardous condition.
11. Do not charge the drill when the charger is plugged into a power source.
12. Do not attempt to open the charger or the drill. There are no customer serviceable parts inside. Return to any authorized Black & Decker service center.
13. Do not use the drill if the charger or battery pack are severely damaged or completely worn out. The batteries can explode in a fire.
14. A small leakage of liquid from the battery pack cells may occur under extreme usage. This leakage is normal and does not indicate a failure. However, if the outer seal is broken and this leakage gets on your skin, Wash quickly with soap and water.
15. Use with a mild acid or alkali solution such as lemon juice or vinegar.

c. If the battery pack liquid gets in your eyes, flush them with clean water for a minimum of 10 minutes and seek immediate medical attention. **MEDICAL NOTE:** The liquid is a 25-35% solution of potassium hydroxide.

Yours. Do not use either a pack plug charger or a cup charger, both of which are described in the instructions for the battery pack. The battery pack is designed to be charged by a power source designed to use standard 120 volt AC, 60 Hz power. Do not use DC or any other voltage. **THE BATTERIES IN YOUR BATTERY PACK ARE NOT FULLY CHARGED AT THE TIME OF PURCHASE. WAITING TO CHARGE THEM. THOROUGHLY READ ALL OF THE SAFETY INSTRUCTIONS.**

1. Place the battery pack into the tool until it "clicks" into place.
 2. Insert the charger plug into the connector as shown in **Figure 1**.
 3. Plug the charger into any standard 120 Volt 60 Hz electrical outlet and let the battery charge overnight. Fully charged battery will be warm to the touch, under normal usage, your battery pack should be fully charged in **3 to 6 hours**.
 4. Disconnect the charger from the outlet, then disconnect the charger from the tool.
 5. **WARNING:** Do not use the tool while it is connected to the charger.
- NOTE:** To remove the battery pack from the drill, press down on the release button on the back of the battery pack (**Figure 2**) and slide out.

2. Plug the charger into any standard 120 Volt 60-Hz electrical outlet.
 3. Slide the charger on the battery pack as shown in **Figure 3** and let the battery pack charge for **3 to 6 hours**. After the charge, under normal usage, your battery pack should be fully charged in **3 to 6 hours**.
 4. Unplug charger, and remove the battery pack. Place the battery pack into the tool until it is in the **imp2** place.
- NOTE:** To remove the battery pack from the drill, press down on the release button on the back of the battery pack (**Figure 2**) and slide out.

- After normal use, your battery pack should be fully charged in 3 to 6 hours. If the battery pack is not fully charged, it will not operate properly. If the battery pack is not fully charged, it will not operate properly.
- Your battery pack was sent from the factory in an uncharged condition. Before attempting to use it, it must be charged for at least 6 hours.
- Do not store the battery pack at temperatures below 40°F (4.5°C) or above 105°F (40.5°C). This is important and will prevent serious damage to the battery pack. Longest life and best performance can be obtained if battery pack is charged when at room temperature (72°F (24°C)).
- While charging, the charger may hum and become warm to touch. This is a normal condition and does not indicate a problem.
- Do not use the battery pack properly. (1) Check current at receptacle by plugging in a lamp or other appliance. (2) Check to see if receptacle is connected to a light switch which turns power out when you turn it off. (3) Make sure the battery pack is plugged in properly and the temperature is OK, and you do not get proper charging, take or send the battery pack to your local Black & Decker service center. See Tools & Accessories section for more information. (4) If the battery pack is not working properly, see the Troubleshooting section. (5) Electric in yellow pages.
- The battery pack should be recharged when it fails to produce sufficient power on jobs or when it is used for extended periods. **DO NOT CONTINUE** using product with its battery pack in a depleted condition.
- To prolong battery pack life, avoid leaving the battery pack on charge for extended periods of time. Overcharging is not a safety concern, it can significantly reduce overall battery pack life.
- When the battery pack is inserted into the charger, the red "Charging Indicator" light will glow. If the light is not glowing, the battery pack is not properly inserted. The light will stay on as long as the battery pack is in the charger and the charger is plugged into a working outlet. If the light **WILL NOT** flash, go out or change to a different color when the charging is complete, the battery pack may be defective.
- The battery pack will reach optimum performance after being cycled 5 times during normal usage. There is no need to run the batteries down completely before recharging. Normal use will gradually wear out the battery pack and it will need to be replaced.

- NOTE:** Make sure your battery pack is fully charged.
- To install the battery pack into the tool handle, align the base of the tool with the rails inside the tool's handle and slide the battery pack firmly into the handle until you hear the lock snap into place.
- To remove the battery pack from the tool, press the battery pack release button (G) and firmly pull the battery pack out of the tool handle (figure 2).

- The drill is turned ON and OFF by pulling and releasing the trigger switch (A) shown in figure 4. The farther the trigger is depressed, the higher the speed of the drill. A forward/reverse control button (B) determines the direction of the tool and also serves as a lock-off button. To select forward rotation, release the trigger switch and depress the forward/reverse control button to the left. To select reverse rotation, release the trigger switch and depress the button to the right. The center position of the control button locks the tool in the off position. When changing the position of the control button, be sure the trigger is released.

- To set the tool's torque, rotate the adjustable torque collar as required. There are 24 clutch settings in all. These are indicated by numbers depicted on the torque collar. For light duty work when using small screws, set the collar to the smallest number. Each click in a counter-clockwise direction results in an increase in the torque produced. If the collar is turned to the leftmost position the clutch collar to a higher number. The rightmost position is the drill mode and is indicated by a drill bit icon. In this position the clutch will not operate. This permits heavy duty drilling.

1. To insert a drill bit or other accessory:
 2. Grasp the chuck collar with one hand and use your other hand to rotate the chuck in the counterclockwise direction, as viewed from the chuck end.
 3. Insert the bit or other accessory fully into the chuck, and tighten securely by holding the rear portion of the chuck and rotating the front portion of the chuck in the clockwise direction, as viewed from the chuck end.
- WARNING:** Do not attempt to tighten drill bits (or any other accessory) by gripping the front part of the chuck and turning the tool on. Damage to the chuck and personal injury may occur when changing accessories.

- For driving fasteners, the reversing button should be pushed to the left. Use reverse (button pushed to the right) for removing fasteners. When moving from forward to reverse, or vice versa, always release the trigger switch first.

- Use sharp drill bits only.
- Support and secure work properly, as instructed in the Safety Instructions.
- Use proper required safety equipment, as instructed in the Safety Instructions.
- Secure and maintain work area, as instructed in the Safety Instructions.
- Run the drill very slowly, using light pressure, until the hole is started enough to keep the first bit from slipping.
- Apply pressure in a straight line with the bit. Use enough pressure to keep the bit biting but not so much as to stall the motor or deflect the bit.
- **Hold the drill firmly with two hands to control its twisting action.**
- **DO NOT STOP THE DRILL OR STOP THE DRILL ON AND ON IN AN ATTEMPT TO START IT. DAMAGE TO THE DRILL CAN RESULT.**
- Minimize stalling on breakthrough by reducing pressure and slowly drilling through the last bit of material.
- Keep the motor running while pulling the bit out of a drilled hole. This will help reduce jamming.
- Use a cutting lubricant when drilling metals. The exceptions are cast iron and brass which should be drilled dry. The lubricants that work best are sulphurized cutting oil or kerosene.
- When using twist drill bits to drill holes in wood, it will be necessary to pull the bits out frequently to clear chips from the flutes.

Black And Decker Drill User Manual
