Lightweight and Sustainable Materials for Automotive Applications Omar Faruk, Jimi Tjong, Mohini Sain, 2017-06-01

Automotive manufacturers are required to decrease CO₂ emissions and increase fuel economy while assuring driver comfort and safety. In recent years there has been rapid development in the application of lightweight and sustainable materials in the automotive industry to help meet these criteria. This book provides critical reviews and the latest research results of various lightweight and sustainable materials in automotive applications. It discusses current applications and future trends of lightweight materials in the automotive area. While there are a few books published mainly focusing on automotive applications of metallic lightweight materials to date, there is no available book focusing on a broad spectrum of lightweight materials including metal plastic composites, bio fiber, bio polymer, carbon fiber, glass fiber, nanomaterials, rubber materials, and foaming materials as this work does. The book also includes case studies of commercial lightweight automotive parts from sustainable lightweight materials, providing an invaluable resource to those involved in this in demand research and commercialization area. *Motor Cycling and Motoring*, 1985-04

Sensors for Safety and Process Control in Hydrogen Technologies Thomas Hübert, Lois Boon-Brett, William Buttner, 2018-10-09. Understand, Select and Design Sensors for Hydrogen Based Applications. The use of hydrogen generated from renewable energy sources is expected to become an essential component of a low carbon environmentally friendly energy supply, spurring the worldwide development of hydrogen technologies. *Sensors for Safety and Process Control in Hydrogen Technologies* provides practical, expert driven information on modern sensors for hydrogen and other gases as well as physical parameters essential for safety and process control in hydrogen technologies. It illustrates how sensing technologies can ensure the safe and efficient implementation of the emerging global hydrogen market. The book explains the various facets of sensor technologies including practical aspects relevant in hydrogen technologies. It presents a comprehensive and up to date account of the theory, physical and chemical principles, design and implementations of sensors in hydrogen technologies. The authors also offer guidance on the development of new sensors based on the analysis of the capabilities and limitations of existing sensors with respect to current performance requirements. Suitable for both technical and non technical personnel, the book provides a balance between detailed descriptions and simple explanations. It gives invaluable insight into the role sensors play as key enabling devices for both control and safety in established and emerging hydrogen technologies. *Road and Track*, 2005
