Climate Change and Cotton Production in Modern Farming Systems Michael P Bange, JT Baker, PJ Bauer, KJ Broughton, GA Constable, Q Luo, DM Oosterhuis, Y Osanai, P Payton, DT Tissue, KR Reddy, BK Singh, 2016-03-02 Throughout the world cotton is broadly adapted to growing in temperate sub tropical and tropical environments but growth may be challenged by future climate change Production may be directly affected by changes in crop photosynthesis and water use due to rising CO₂ and changes in regional temperature patterns Indirect effects may result from a range of government regulations aimed at climate change mitigation While there is certainty that future climate change will impact cotton production systems there will be opportunities to adapt This review begins to provide details for the formation of robust frameworks to evaluate the impact of projected climatic changes highlight the risks and opportunities with adaptation and details the approaches for investment in research Ultimately it is a multi faceted systems based approach that combines all elements of the cropping system that will provide the best insurance to harness the change that is occurring and best allow cotton industries worldwide to adapt Given that there will be no single solution for all of the challenges raised by climate change and variability the best adaptation strategy for industry will be to develop more resilient systems Early implementation of adaptation strategies particularly in regard to enhancing resilience has the potential to significantly reduce the negative impacts of climate change now and in the future

Soils, Plant Growth and Crop Production - Volume II Willy H. Verheye, 2010-11-30 Soils Plant Growth and Crop Production is a component of Encyclopedia of Food and Agricultural Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias Plants and crops in particular grow and develop through the uptake of water and nutrients by the root system in soils and their transformation into biomass through processes governed by photosynthesis The quality and amount of products harvested from this biomass depend largely on the intrinsic properties of the soil i e the moisture and nutrients made available for uptake by the roots These volumes describe in a synthetic form the impact of the most important soil properties on general agronomy crop production cultivation methods and yields including the specific management aspects which take away some production constraints Changes in general agronomy as a result of plant breeding climatic change and competition between newly introduced crops are discussed The three volumes with contributions from distinguished experts in the field discusses about soils plant growth and crop production in several related topics These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs
