

Example risk assessment for motor vehicle repair workshop

The garage manager did the risk assessment. The business employs 12 mechanics, including two apprentices who carry out mechanical repairs.

How was the risk assessment done?

The manager followed the advice at www.hse.gov.uk/simple-health-safety/risk/.

Having looked at relevant HSE guidance for the motor vehicle repair industry (www.hse.gov.uk/mvri/) and read the manufacturers' instructions for chemicals and equipment, they identified the hazards in the garage by:

- walking around the repair workshop and noting things that might cause harm;
- talking to workers to learn from their knowledge and experience and listen to their concerns;
- confirming what training had been provided;
- considering particular requirements for the apprentices in line with HSE's advice on [young workers](#);
- phoning the licensed disposal contractor to discuss arrangements for waste disposal;
- looking at the accident book to learn what had previously resulted in accidents or near misses.

The manager noted what was already being done to control the risks and recorded any further actions required.

Putting the risk assessment into practice, the manager set out what actions needed to be taken, who would do them and by when. The findings were discussed by the supervisors and their teams of mechanics.

The manager will review the risk assessment whenever there are any significant changes such as new work equipment, work activities or workers.

Do not just copy this example and put your company name to it as that would not satisfy the law and would not protect your employees. You must think about the specific hazards and controls your business needs.

The HSE site has a [template and other examples](#) to help you produce your own assessment.
