H. C. Reiber,P.W. Serruys,2012-12-06 There are few techniques that have influenced therapeutic strategies in modern
cardiology to a similar extent as coronary arteriography Bypass surgery as well as transluminal coronary angioplasty would
not have been possible without coronary angiography serving as a midwife in their evolution Despite the widespread and
long standing use in clinical practice however the interpretation of coronary angiograms has not changed very much since
the early days Most angiograms are still reviewed in a visual and semi quantitative and thus often very subjective way In the
face of an almost exploding field for interventional catheterization including thrombolysis balloon dilatation and other rapidly
evolving techniques for transluminal revascularization or recanalization a more detailed and quantitative analysis of coronary
arteriograms is urgently required In addition to the delineation of coronary morphology we need dynamic and functional
information about flow and perfusion to understand the physiological significance of anatomic abnormalities Coronary
arteriography contains and can provide most of this information With the application of appropriate techniques it can be
made available in the catheterization laboratory even during the patient's investigation thus facilitating and improving
clinical decision making Objective and reproducible analysis will furthermore enhance our understanding about the
pathophysiology of coronary disease **Réussite Concours IFSI - Concours d'entrée 2018 - N°74** Jackie Pillard,Nathalie
