Motion : A Body is said to be in motion (or moving) when its position change continuously with respect to a stationary object taken as reference point

DISTANCE TRAVELLED AND DISPLACEMENT

Distance Travelled : The distance travelled by body is the actual length of the path covered by a moving body irrespective of the distance in which the body travels

Displacement : When a body moves from one position to another the shortest (straight line) distance between the initial position and final position of the body, along with distance is known as its displacement.

- i) Distance is scalar quality (because it has magnitude only its has no specific distance.
- ii) Displacement is a vector quality (because its has magnitude as well as a direction.

The distance travelled by a moving body cannot be zero but the final displacement of a moving body.
