*Introduction to Plant Physiology* William G. Hopkins, Norman P. A. H ner, 2004. Cells, tissues and organs: the architecture of plants. The plant cell: building blocks: lipids, proteins and carbohydrates. Lipids are a class of molecules that includes fats, oils, sterols and pigments. Proteins play a central role in the biochemistry of cells and are responsible for virtually all the properties of life as we know it. Carbohydrates are the most abundant class of biological molecules. Biological membranes: The membrane lipid forms a bilayer, a highly fluid but very stable structure. Membranes contain significant amounts of protein. Cellular organelles: Most mature plant cells contain a large central vacuole. The nucleus is the information center of the cell. The endoplasmic reticulum and Golgi apparatus are centers of membrane biosynthesis and secretory activities. The mitochondrion is the principal site of cellular respiration. Plastids are a family of organelles with a variety of functions. Microbodies are

metabolically very active Cytoskeleton the extracellular matrix The primary cell wall is a flexible network of cellulose microfibrils and cross linking glycans The cellulose glycan lattice is embedded in a matrix of pectin and protein Cellulose microfibrils are assembled at the plasma membrane as they are extruded into the cell wall The secondary cell wall is deposited on the inside of the primary wall in maturing cells Plasmodesmata are cytoplasmic channels extend through the wall to connect the protoplasts of adjacent cells Tissues and organs Tissues are groups of cells that form organized functional unit Meristems are regions of perpetually dividing cells Parenchyma is the most abundant living tissue in plants Supporting tissues are distributed throughout the primary and secondary plant bodies Vascular tissues are the principal conducting tissues for water and nutrients Epidermis is a superficial tissue that forms a continuous layer over the surface of the primary Plant body Plant organs Roots anchor the plant and absorb water and minerals from the soil Conservation Biology in Australia and Oceania Craig Moritz, Jiro Kikkawa, 1994 Conservation biology in Australia and Oceania
