

Chapter 26: Phylogeny and the Tree of Life

- 26.1 Define phylogeny and explain how phylogenies are used.
 26.2 Explain how phylogenetic trees are inferred from data.
 26.3 Differentiate between derived and ancestral characters and explain how they are used to construct phylogenetic trees.
 26.4 Describe what evidence a genome provides about evolutionary history.
 26.5 Explain what molecular clocks are and how they are used.
 26.6 Describe the possible structure of the tree of all life.

Every topic you study ties in with evolution, but this chapter specifically deals with the evidence that can be used to build cladograms, and how these phylogenetic trees are interpreted. Throughout your study of biology, you will use this skill over and over.

Study Tip: The underlying concept in preparing phylogenetic trees, like the one in Figure 26.1 in your text, is to use traits shared due to *common ancestry* to classify organisms into groups that reflect their *evolutionary history*. Your first step in learning how to prepare and interpret phylogenetic trees is to label Figure 26.1 below. Working from what you have labeled, explain the significance of *common ancestor*, *sister taxa*, and what a *character* represents.

Phylogeny

- evolutionary history of a species/group

Taxonomy

- scientific discipline concerned with naming & classifying diverse forms of life.
