

## Chapter 1: Human Genome

### 1.1. INTRODUCING GENES AND GENOME

- **Genetics** – study of heredity, traits and their variations.
  - study of how traits are transmitted.
- **Heredity** – transmission of traits and biological information.
- **Genes** – basic unit of heredity.
  - instruct cell's production of proteins.
  - consist of long DNA.
  - provide-encoding genes are scattered among 3.2 billion DNA bases in each set of chromosomes.
- **Phenotype** – control the characteristics of every individual.
- **DNA (Deoxyribonucleic Acid)** – transmits information in sequence of nitrogenous bases.
- **Genome** – make up of complete set of genetic instructions characteristic of each an organism.
  - all of our cells contain two sets copies of genome.
- **Genetics** – scientific field that analyzes genomes.
  - reveals how closely related are different species.

### 1.2 LEVELS OF GENETICS AND GENOMICS

- **DNA (Deoxyribonucleic Acid)**
  - Shape: double helix
  - Consist of: alternating sugar and phosphates
  - Function: provide information to manufacture specific proteins

- 4 types of nitrogenous bases:
  - Adenine (A) and Thymine (T)
  - Cytosine (C) and Guanine (G)
  - Each set of these complementary bases is a code for a particular amino acid.
- **Amino Acid** – building blocks of protein.
  - align and link like snap beads forming protein

### 1.3. THREE PROCESSES OF ACCESSING GENETIC INFORMATION

- **DNA replication** – (1) chains of double helix untwist and separate.
  - (2) each full helix is a new partner chain from two DNA bases.
- **Transcription** – (3) copies the sequence of one strand of DNA molecule into mRNA.
- **Translation** – (4) each 3 DNA bases is a new attract another type of RNA, that functions as a connector, bringing in a particular amino acid.
  - (5) Amino acids align and link to form protein.

### 1.2 THE HUMAN GENOME

- **20,125 protein-encoding genes** comprise the genome.
  - Accounts: 1.5 percent of human genome, 8.5 percent of known genetic diseases.
- **Alloles ("gene variants")** – some proteins – encoding genes may vary in DNA base sequence from person to person that is passed to the next generation.
- **Mutations ("changed gene")** – alteration or change in genes, causing a disease.

### 1.3. INHERITED DISEASES

- **Cystic Fibrosis** – inherited disease
  - Change of a "C" to "T" inserts amino acid rather than the amino acid glycine which results to proteins becoming abnormal.
  - Cystic Fibrosis Transmembrane

*The Human Disease* Sabrina Sholts, 2024-04-09 How the very fact of being human makes us vulnerable to pandemics and gives us the power to save ourselves The COVID 19 pandemic won't be our last because what makes us vulnerable to pandemics also makes us human That is the uncomfortable but all too timely message of *The Human Disease* which travels through history and around the globe to examine how and why pandemics are an inescapable threat of our own making Drawing on dozens of disciplines from medicine epidemiology and microbiology to anthropology sociology ecology and neuroscience as well as a unique expertise in public education about pandemic risks biological anthropologist Sabrina Sholts identifies the human traits and tendencies that double as pandemic liabilities from the anatomy that defines us to the misperceptions that divide us Weaving together a wealth of personal experiences scientific findings and historical stories Sholts brings dramatic and much needed clarity to one of the most profound challenges we face as a species Though the COVID 19 pandemic looms large in Sholts's account it is in fact just one of the many infectious disease events explored in *The Human Disease* With its expansive evolutionary perspective the book explains how humanity will continue to face new pandemics because humans cause them by the ways that we are and the things that we do By recognizing our risks Sholts suggests we can take actions to reduce them When the next pandemic happens and how bad it becomes are largely within our highly capable human hands and will be determined by what we do with our extraordinary human brains
