Meinardi, 1999-12-16 An excellent stand alone reference book which will assist the busy neurologist to quickly find essential information and with sufficient depth to take well informed decisions in clinical practice The book addresses one of the most prevalent neurological disorders the epilepsies The classification of the epilepsies and epileptic

seizures as accepted by the International League Against Epilepsy is presented by a prominent member of the responsible commission After an overview of the epidemiology the basic mechanisms of epileptogenesis are discussed In a handbook the emphasis is on aspects of differential diagnosis auxiliary diagnostic procedures and treatment As one of the problems that faces the neurologist is the distinction between the syndromes that have been recognized and incorporated in the international classification each is allocated a chapter Although many epilepsies are of idiosyncratic or cryptogenic origin a special section is devoted to aetiological factors The treatment section not only deals with pharmacotherapy but also with surgical treatment psycho social rehabilitation and the treatment of associated psychiatric disorders The contents of this volume have been screened to contain as much as possible established facts and the least possible speculative matter An exception has been made for the developments in the relatively new field of assessment of the impact of epilepsy and its treatment on quality of life

Single-Molecule Cellular Biophysics Mark C. Leake, 2013-01-31 Recent advances in single molecule science have presented a new branch of science single molecule cellular biophysics combining classical cell biology with cutting edge single molecule biophysics This textbook explains the essential elements of this new discipline from the state of the art single molecule techniques to real world applications in unravelling the inner workings of the cell Every effort has been made to ensure the text can be easily understood by students from both the physical and life sciences Mathematical derivations are kept to a minimum whilst unnecessary biological terminology is avoided and text boxes provide readers from either background with additional information 100 end of chapter exercises are divided into those aimed at physical sciences students those aimed at life science students and those that can be tackled by students from both disciplines The use of case studies and real research examples make this textbook indispensable for undergraduate students entering this exciting field

Life David E. Sadava, 2008 This text aims to establish biology as a discipline not just a collection of facts Life develops students understanding of biological processes with scholarship a smooth narrative experimental contexts art and effective pedagogy

Loose-leaf Version for Molecular Cell Biology Harvey Lodish, Arnold Berk, Chris A. Kaiser, Monty Krieger, Matthew P. Scott, Anthony Bretscher, Hidde Ploegh, Paul Matsudaira, 2012-09-01 Molecular Cell Biology presents the key concepts in cell biology and their experimental underpinnings The authors all world class researchers and teachers incorporate medically relevant examples where appropriate to help illustrate the connections between cell biology and health and human disease As always a hallmark of Molecular Cell Biology is the use of experiments to engage students in the history of cell biology and the research that has contributed to the field New Co Author Angelika Amon The new edition of Molecular Cell Biology introduces a new member to our author team respected researcher and teacher Angelika Amon of the Massachusetts Institute of Technology Dr Amon is an Investigator at the Howard Hughes Medical Institute as well as a member of the Koch Institute for Integrative Cancer Research and the National Academy of Sciences Her laboratory studies the molecular mechanisms that govern chromosome segregation during mitosis and meiosis and the consequences when

these mechanisms fail during normal cell proliferation and cancer development Increased Clarity Improved Pedagogy In the new edition the authors have scrutinized every chapter with an eye toward bringing out key concepts and making connections easier to follow Perennially challenging topics such as cellular energetics cell signaling and immunology have been revised to improve student understanding Coverage of developmental biology has been streamlined to focus on just those key areas central to cell biology courses Every figure in the book was reconsidered and if possible simplified to highlight key lessons Revised end of chapter materials include new questions including additional Analyze the Data problems to give students added practice at interpreting experimental evidence The result is a book that balances currency and experimental focus with attention to clarity organization and pedagogy

Highlights of the New Edition

Chapter 1 Molecules Cells and Evolution now frames cell biology in the light of evolution because we all come from the same ancestor cell the molecules and processes of cell biology are similar in all forms of life We can use model organisms to study aspects of cell structure and function that have been conserved across millions of years of evolution

Chapter 9 Culturing Visualizing and Perturbing Cells has been rewritten to include cutting edge methods including FRAP FRET siRNA and chemical biology making it a state of the art methods chapter

Cell signaling chapters Chapters 15 16 have been reorganized and illustrated with simplified overview figures to help students navigate the complexity of signaling pathways

Fully Reconceived Thoroughly Updated Chapter 19 The Eukaryotic Cell Cycle now begins with the concept of START a cell's commitment to entering the cell cycle starting with DNA synthesis and then progresses through the cycle stages The chapter focuses on yeast and mammals and uses general names for cell cycle components as much as possible
