

Chapter 24, Magnetic Forces and Fields Physics II, PHY 2054, Fall 2021

The electron has an electrical charge ($q_e = 1.6 \times 10^{-19} \text{ C}$) associated with it that produces an electric field that exerts forces on charged objects. The electron also has a magnetic moment that produces a magnetic field that interacts with moving charge and material with magnetic properties. The electric charge is the source of the magnetic field we experience in everyday life.

- ✓ Although the magnetic fields and electric fields originate from the same source (charge) they have very different properties!

Magnetic Fields (\vec{B}) – A magnetic field exists in an otherwise empty space if a charged object moving through that region experience a force due to its motion in the magnetic field or a magnetic material in that region of space experience a force due to its magnetism.

Permanent Magnetic

Current in wire

- The magnetic field and force are vectors therefore their magnitude and direction must be taken into account.

Units of Magnetic Field (\vec{B})

$$1 \text{ Tesla (T)} = 1 \text{ N/Am} = 1 \text{ weber/m}^2 \quad \text{or} \quad 1 \times 10^{-4} \text{ T} = 1 \text{ gauss (G)}$$

The Magnetic Field is analogous to other Fields – A field in physics is a condition in space that creates a force when an object is placed in that field with a property that interacts with that field. Charged objects that are moving or material with magnetic properties interact with the magnetic field.

Mass is the property for gravity, charge is the property for electric fields and moving charge is the property for the magnetic field

Gravitational Field	– Force per unit mass [N/kg] $g = F_g/m$
Electric field	– Force per unit charge [N/C] $E = F_E/q$
Magnetic Field	– Force per unit moving charge [N/(Cm/s)] $B = F_B/qv$
