SERVICE DATA No. 438

M.G. MIDGET Mk. II

Manufacturers: B.M.C. Ltd., Cowley, Oxford

All rights reserved. This Service Data Sheet is compiled by the technical staff of Motor Trader from information made available by the vehicle manufacturers and from our own experience. It is the copyright of this journal, and may not be reproduced, in whole or in part, without permission. While care is taken to ensure accuracy we do not accept responsibility for errors or omissions.

PRODUCED under the overall aegis of the British Motor Corporation, the M.G. Midget is now in Mk. II form. It differs from the preceding model in a number of ways, and readers will recall that late Mk. I versions of these cars were fitted with the 1200-cc. engine and disc brakes on front wheels. These components are, of course, standard fittings on current Mk. II cars.

DISTINGUISHING FEATURES: Swivelling quarter lights and wind-up windows identify the Mark II cars in latest form, although styling in general follows the lines of previous models.

It is evident from the construction of the car that many of the mechanical units are similar to those in use on other models in the B.M.C. range, but so is the custom,

these units are specifically adapted for this model.

The engine is of familiar design and construction, has four cylinders with overhead valves, and

there is the option of either 8.1:1 or 9.5:1 compression ratio. Drive is transmitted through a single dry plate hydraulically operated clutch to a four-speed synchromesh gearbox, and by short open tubular propeller shaft to the hypoid bevel reduction gear contained within the three-quarter floating rear axle. Front suspension is of the coil spring and wishbone link pattern, with hydraulic shock absorbers. Rear suspension is effected through semi-elliptic leaf springs and lever-arm hydraulic dampers.

Steering is by rack and pinion which, of course, combines the advantages of direct action with compactness of installation, each end of the rack being attached to the steering arms of each front suspension unit by short track rods.

Vehicles are identified in the customary B.M.C. manner. Engine numbers are stamped on a plate which is secured to the right-hand side of the cylinder block, above the dynamo and below No. 1 sparking plug. The car (chassis) number is stamped on a plate which is secured to the inner wheel arch valance and is visible on lifting the bonnet. It is essential that all the letters and numbers which make up the car serial number are quoted when corresponding with the vehicle manufacturers, or when ordering spare parts.

Threads and hexagons are, in the main, of the United thread series pattern and form, and are marked as such. These parts are not interchangeable with changed parts of any other thread series apart from A.N.F. threaded parts.

INSTRUMENTS, CONTROLS, GEAR POSITIONS AND BONNET LOCK

Inset upper left: shows the siting of the steering column mounted controls. Lower inset left: the operation of the bonnet release mechanism. Lower inset right: the operating positions of the centre mounted gearlever.
