California. Court of Appeal (2nd Appellate District). Records and Briefs California (State)., **Cardiovascular System Dynamics** Jan Baan, Abraham Noordergraaf, Jeff Raines, 1978
This book offers a novel approach to the study of the mammalian cardiovascular system
Instead of focusing on a particular part of the system or on a particular group of techniques or approaching the system from a particular point of view it stresses a balanced presentation of ideas
all the major component parts of the system are discussed as well as the behavior of the system as an integrated whole
both basic and clinical viewpoints are represented
both detailed analysis and comprehensive synthesis are offered
In addition trends in modern instrumentation and the use of computers in improving patient care are important and recurrent themes
Spirited discussions of current controversies and philosophies highlight the presentations
The 62 papers in this volume were invited for a major international conference held in April 1975 which marked the coming of age of this field and led to the founding of the Cardiovascular System Dynamics Society
The conference brought together outstanding researchers in the life sciences biology physiology medicine and the physical sciences biophysics bioengineering in order to integrate their findings more intricately and to chart the present state and future directions of the field
Since the cardiovascular system has been one of the first areas to receive attention under the newly emerging symbiosis between engineering and medicine the book also serves a useful secondary purpose as a model of what can be accomplished by such integrated effort
The papers are organized into 12 sections
The first 9 offer a tour of the cardiovascular system with papers arranged within each section to lead the reader from theoretical to clinical viewpoints
Included are sections on cardiac muscle coronary circulation ventricular dynamics systemic arterial tree microcirculation systemic veins pulmonary vasculature control mechanisms in specific vascular beds and cardiovascular system control
The last 3 sections offer tutorial overviews of theoretical and experimental methods applied to the cardiovascular system and of cardiovascular instrumentation and computer analysis
