Carnegie Learning Integrated Math Chapter 13 Test:

Studying Virtual Math Teams Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together. These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies. The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL. More generally, the theme of sense making is a central topic in information science. While many authors allude to these topics, few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making. This book presents a coherent research agenda that has been pursued by the author and his research group. The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field. The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project. These chapters are followed by several studies by international collaborators discussing the group discourse, the software affordances, and alternative representations of the interaction, all using data from the VMT project. The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences. In addition to substantial introductory and concluding chapters, this important new book includes analyses based upon the author's previous research, thereby providing smooth continuity and an engaging flow that follows the progression of the research. The VMT project has dual goals: a) to provide a source of experience and data for practical and theoretical explorations of group knowledge building, and b) to develop an effective online environment and educational service for collaborative learning of mathematics. Studying Virtual Math Teams reflects these twin orientations, reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service. It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse.

The Education Index, 1932 Contemporary Societies Daniel J. Curran, Claire M. Renzetti, 1994 In editing this book, one of our primary concerns was to assist students in developing a structural analysis of the serious social problems they repeatedly hear about on television, in political campaigns, and in newspapers, and more importantly, that some may experience in their everyday lives. We wanted to help them see the personal as political so that they could critically evaluate the structural causes of these problems and in turn begin to conceive of structural or collective actions to solve them. Consequently, readers will find in the chapter introductions in this book, and in the readings themselves, a strong critical or conflict orientation with an emphasis on the roles of particular social institutions and normative policies and procedures in the

generation and perpetuation of social problems In addition a major theme of the text is the global reach of social problems
