

● Chapter 20: Organizing Life on Earth

○ Noteworthy:

- Phylogenetic trees to be a hypothesis of The evolutionary path since one cannot go back to confirm the proposed relationships.
- It may be easy to assume that more closely related organisms look more alike and while this is often the case it is not always true that too closely related languages evolved under significantly very surroundings it is possible for the two groups to appear more different than other groups that are not as closely related.
- Another aspect of phylogenetic trees is that unless otherwise indicated, the branches do not account for the length of time only The evolutionary order and other words of branches laying does not typically mean more time passed, nor does a short branch mean last time passed unless specified on a diagram.
- For example, after the comment beginning of all life, scientist divide organisms into three categories called domains bacteria Archaea and Eukarya with an Eastern man it's a second category called Kingdom after kingdoms the subsequent categories of increasing specificity are phylum class order family genus and species.

- Domain
- Kingdom
- Phylum
- Class
- Order
- Family
- Genus
- Species
- Subspecies

- In general, organisms that share similar physical features and genomes are more closely related than those that do not. We refer to such features that overlap both morphologically (in form) and genetically as homologous structures. They stem from developmental similarities that are based on evolution.
