Accounting language English abstract It was clear from the recent financial scandals and fraud law suits in the international and regional firms that the internal control in general isn't as strong as should and that there are some weaknesses that led to this outcome and that why we are interested to investigate the internal control and the internal observation systems in the listed Palestinian corporations to put the lights on the real reasons and causes for such problem Many researchers and observers believe that one of the main reasons for such problem is the insufficient reliance on the function of the internal auditor and not assigning this function with its real importance in the companies especially if we consider how significant is this function becomes as the companies are getting larger and the operations are extending to be more in terms of the volume and the complexity and more importantly the competition is getting tougher among the companies The internal audit is consider to be a type of the observational procedures that can be used to assess the effectiveness of the other observational and audit procedures and that is why many researchers consider it as the core of concentration in the audit hierarchy that supplement the other tools in ensuring these tools ability to safeguard the companies assets make sure about the fairness of the financial data and encourage the commitment in the managerial policies **Value at Risk, 3rd Ed.**

Johannes Euler, 2017-03-09 Seminar paper from the year 2017 in the subject Business economics Supply Production Logistics grade 1.0 Reutlingen University language English abstract

Driven by a high intensity of competition modern companies have put much effort into reducing costs in their supply chain. Two important trends on the way to achieving that goal are globalization and lean management. Both have led to complex highly distributed supply chains and low buffer stocks. Indeed, these mechanisms brought lower costs but at the same time an increase of vulnerability and risk in modern supply chains. Unexpected disruptions in supply chains can cause a huge impact on businesses such as high financial expenses and supply delays on the short term but also negative brand reputation and falling investor confidence on the long term. This is why the implementation of the approaches supply chain risk management (SCRM) and business continuity management (BCM) has become crucial in the sphere of top level management. Digitization is another disruptive trend within the present economic system. The volume of available data for businesses has been increasing exponentially in the last years. But at the same time most companies have failed using these data essential in decision making process. These unused data offer great potential. With Big Data Analytics they could turn companies supply chain risks into a competitive advantage. This case study deals in virtue of the quote from JFK with the research question: How can IT tools support companies making their supply chains resilient? To this effect the first chapter describes key risks in modern supply chain in order to create a general awareness of the scope of SCRM and BCM approaches. The next chapter then compares two common supply chain strategies with a focus on resilience in order to evaluate the proposed solution at the end of this case study. Thereupon Chapter 4 answers the research question of this case study by comprising the key components of the SCRM solution DHL Resilience 360. The last chapter evaluates the proposed solution based on the output of Chapter 3 on the one hand and on own practical considerations on the other hand.
