CHAPTER 1 INTRODUCTION TO ECOLOGY AND THE BIOSPHERE

YOU MUST KNOW:

- The role of abiotic factors in the formation of biomes.
- Features of freshwater and marine biomes
- Characteristics of the major terrestrial biomes

NOTES:

- I. WHAT DOES ECOLOGY STUDY?
 - **Ecology** – the Study of Interactions Between Organisms and the Environment
 - Organisms all live in complex environment that include:
 - a. **Abiotic** components – The nonliving components of the environment such as water, light, temperature, nutrients, soil.
 - b. **Biotic** components – the living components of the environment such as other organisms as foods, other resources, or predators.
 - These environmental factors limit the geographic range (distribution) and the abundance of species.
 - Ecology is studied on several levels of organization
 - **Organism** – physiology, evolution, behavior of organisms in relation to environmental factors.
 - **Population** – interactions of individuals of the same species, living in the same environment
 - **Community** – studies the interactions of all living organisms that are living in the same area
 - **Ecosystem** – emphasizes energy flow and chemical cycling among organisms and the abiotic environment
 - **Biosphere** – includes the entire portion of Earth that is inhabited by life. Studies global effects of climate change, ozone depletion, mass extinction etc.
- II. WHAT CAN LIMIT SPECIES DISTRIBUTION AND DISPERSAL?
 - **Dispersal** – the movement of organisms from centers of high density or from center of origin to other areas.
 - Dispersal can be two kinds:
 - Natural range expansions – organisms move into previously uninhabited areas as a natural way of expanding the population.
 - Species transplants – species artificially or accidentally introduced and reproduce in new location.
