## CHAPTER 1 CHEMICAL REACTION AND EQUATION (NOTES)

What is a chemical reaction Class 10?

**Chemical Reaction:** The transformation of chemical substance into another chemical substance is known as Chemical Reaction. For example: Rusting of iron, the setting of milk into curd, digestion of food, respiration, etc.

In a chemical reaction, a new substance is formed which is completely different in properties from the original substance, so in a chemical reaction, a chemical change takes place. Only a rearrangement of atoms takes place in a chemical reaction.

The substances which take part in a chemical reaction are called reactants.

The new substances produced as a result of a chemical reaction are called products.

**Example:** The burning of magnesium in the air to form magnesium oxide is an example of a chemical reaction.

Before burning in air, the magnesium ribbon is cleaned by rubbing with sandpaper.

This is done to remove the protective layer of basic magnesium carbonate from the surface of the magnesium ribbon.

**Reactant:** Substances which take part in a chemical reaction are called reactants.

**Example:** Mg and O<sub>2</sub>.

**Product:** New substance formed after a chemical reaction is called a product.

**Example:** MgO.

**Characteristics of Chemical Reactions :**

(i) **Evolution of gas:** The chemical reaction between zinc and dilute sulphuric acid is characterised by the evolution of hydrogen gas.

(ii) **Change in Colour:** The chemical reaction between citric acid and purple coloured potassium permanganate solution is characterised by a change in colour from purple to colourless.

The chemical reaction between sulphur dioxide gas and acidified potassium dichromate solution is characterized by a change in colour from orange to green.

1770-1883 Charlotte Mary Yonge, 1883      Shifting Paradigms Alexander Blum, 2016 The publication of Thomas S Kuhn's  
*Structure of Scientific Revolutions* in 1962 stands for a turning point in the history and philosophy of science. The  
repercussions of this work have rearticulated the theoretical framework of history and philosophy of science and have also  
generated discussions that contributed to the formation of the communities of historians as well as philosophers of science in  
many parts of the world. Different approaches to history of science have since emerged and most of them have the *Structure*  
as their reference point. In October 2012 a conference at the Max Planck Institute for the History of Science brought together  
some of the historians of science whose work has played a decisive role in the ways history of science has evolved as a field  
of research in the past 50 years both intellectually and institutionally. This volume gathers reflections by many of these  
historians on the history of the history of science based on the presentations and discussions at the conference. The topics  
covered range from personal recollections of working with Thomas Kuhn to broad overviews of the historical development of  
the history of science as a discipline in the past half century. The series *Proceedings of the Max Planck Research Library for*  
*the History and Development of Knowledge* presents the results of scientific meetings on current issues and supports further  
cooperation on these issues via an electronic platform. The volumes are available both as print on demand books and as open  
access publications on the Internet. The material is freely accessible online at [www.edition.openaccess.de](http://www.edition.openaccess.de)      Revolution and  
Dictatorship Steven Levitsky, Lucan Way, 2024-10-29 Why the world's most resilient dictatorships are products of violent  
revolution. *Revolution and Dictatorship* explores why dictatorships born of social revolution such as those in China, Cuba, Iran,  
the Soviet Union, and Vietnam are extraordinarily durable even in the face of economic crisis, large scale policy failure, mass  
discontent, and intense external pressure. Few other modern autocracies have survived in the face of such extreme challenges.  
Drawing on comparative historical analysis, Steven Levitsky and Lucan Way argue that radical efforts to transform the social  
and geopolitical order trigger intense counterrevolutionary conflict which initially threatens regime survival but ultimately  
fosters the unity and state building that supports authoritarianism. Although most revolutionary governments begin weak,  
they challenge powerful domestic and foreign actors, often bringing about civil or external wars. These counterrevolutionary  
wars pose a threat that can destroy new regimes as in the cases of Afghanistan and Cambodia. Among regimes that survive,  
however, prolonged conflicts give rise to a cohesive ruling elite and a powerful and loyal coercive apparatus. This leads to the

downfall of rival organizations and alternative centers of power such as armies churches monarchies and landowners and helps to inoculate revolutionary regimes against elite defection military coups and mass protest three principal sources of authoritarian breakdown Looking at a range of revolutionary and nonrevolutionary regimes from across the globe Revolution and Dictatorship shows why governments that emerge from violent conflict endure *England under the later Hanoverians, 1760-1837, part of the Intermediate text-book of English history, vol.
