

## Static Equilibrium Force and Moment

### 2.1 Concept of Force

#### Equilibrium of a Particle

*You are standing in an elevator, ascending at a constant velocity, what is the resultant force acting on you as a particle?*

The correct response is *zero*. For a particle at rest, or moving with constant velocity relative to an inertial frame, the resultant force acting on the *isolated particle* must be zero, must vanish. We usually attribute this to the unquestionable authority of Newton.

The essential phrases in the question are *constant velocity*, *resultant force* and *particle*. Other words like “standing”, “elevator”, “ascending”, and “you” seem less important, even distracting, but they are there for a reason. The world that you as an engineer will analyze, re-design, and systematize is filled with people and elevators, not isolated particles, velocity vectors, or resultant forces — or at least, not at first sight. The latter concepts are abstractions which you must learn to identify in the world around you in order to work effectively as an engineer, e.g., in order to design an elevator. The problems that appear in engineering text books are a kind of middle ground between abstract theory and everyday reality. We want you to learn to read and see through the superficial appearances, those descriptions which mask certain scientific concepts and principles, in order to grasp and appropriate the underlying forms that provide the basis for engineering analysis and design.

The key phrase in Newton’s requirement is *isolated particle*. It is absolutely essential that you learn to abstract out of the problem statement and all of its relevant and irrelevant words and phrases, a vision of a particle as a point free in space. It’s best to render this vision, this abstraction “hard” by drawing it on a clean sheet of paper. Here is how it would look.
