Vignette Based Multiple Choice Questions In Medical Biochemistry Dr. Ranjit Patil, Dr. Kavindra Borgaonkar, Among the wide variety of written methods of assessment multiple choice questions MCQs especially the single best option variety remain the staple of examinations administered to medical students MCQs are used extensively by medical schools and also in the initial steps of examinations by licensing bodies Their logistical advantage of allowing testing of large number of students and broad sampling of topics in a relatively short time remains unchallenged by any other formats of written examinations The format and wording of the stem of a MCQ play an essential role in determining what is being assessed In its simplest form a MCQ

can ask about an isolated fact Such a context free MCQ tests rote knowledge only Higher order skills such as interpretation and problem solving are best tested using a context rich stem in which the question is embedded in a meaningful context In medical subjects context enrichment most often takes the form of a clinical vignette The advantages of enriching the stem with a clinical vignette are two fold First it allows for the assessment of higher order cognitive skills Second information is thought to be better recalled when the learning context is similar to retrieval context In this book MCQs are based on clinical vignettes The clinical context will increase commitment of the student to acquire and retain basic knowledge of medical biochemistry

Biochemical Education Charles F. Bryce, 2012-12-06 The purpose of the present text is to distil the experience of a number of workers active in the field of biochemical education so providing readable accounts which it is hoped will be of significant benefit to those who are new to the teaching profession in addition to those who may be stimulated to experiment with alternative strategies in their own teaching situation From the various contributions considered in this book each topic in its widest sense would warrant at least a volume on its own and indeed such texts are currently available However it was felt more appropriate to restrict the coverage to those aspects which are of particular use to the subject of biochemistry and for which work in this area has already achieved some measure of success In effect what each of us is doing is supplying findings from a body of knowledge collectively called educational technology Without entering the debate on the semantics of what educational technology is or is not it doesn't take long to realise that like the vast majority of subject areas it has its own unique terminologies and vocabulary Whilst it is inevitable that such terms will appear throughout the text hopefully all will be explained on first use and so it is not envisaged that this will be too distractive to the reader
