*Term is not actually used in lab, but essentially is what they are talking about. They do discuss and have a question on "branching tree diagrams."

Key Points

1. The diversity of life on the planet has been created through the process of evolution by means of natural selection. Differences between or within species is called **biodiversity**.
2. Through natural selection, organisms have evolved to lessen competition, and therefore fill a wide array of niches. This *biodiversity* increases the stability of ecosystems.
3. Biodiversity has important benefits to mankind, including development of new **food** sources and **medicines**; as providing **aesthetic** beauty. Ecosystem destruction leads to the loss of genetic biodiversity and increases the chance that an ecosystem will become **less** stable and collapse.

Procedures

*Safety precautions for the lab include goggles in step 4 & 5 for vinegar and baking soda and paper chromatography using food coloring, vinegar, and water.

1. Seven tests are conducted to determine the relatedness of Samples X,Y, and Z to *Botana curus*. They are as follows:
 - a. Structural Characteristics of Plants
 - b. Structural Characteristics of Seeds
 - c. Structural Characteristics of Stems (Internal Microscopic Structures)
Examine cross sections of the stems. Look for a **scattered** arrangement of bundles or a **circular** arrangement of bundles.
