Biographies Of Scientific Objects:

Biographies of Scientific Objects Lorraine Daston, 2000-06-15 Looks at how whole domains of phenomena come into being and sometimes pass away as objects of scientific study With examples from the natural and social sciences ranging from the 16th to the 20th centuries this book explores the ways in which scientific objects are both real and historical

Biographies of Scientific Objects Lorraine Daston, 2000-06-15 Why does an object or phenomenon become the subject of scientific inquiry Why do some of these objects remain provocative while others fade from center stage And why do objects sometimes return as the focus of research long after they were once abandoned Addressing such questions *Biographies of Scientific Objects* is about how whole domains of phenomena dreams atoms monsters culture society mortality centers of gravity value cytoplasmic particles the self tuberculosis come into being and sometimes pass away as objects of scientific study With examples drawn from both the natural and social sciences and ranging from the sixteenth to the twentieth centuries this book explores the ways in which scientific objects are both real and historical Whether discovered or invented these objects of inquiry broaden and deepen in meaning growing more real as they become entangled in webs of cultural significance material practices and theoretical derivations Thus their biographies will matter to anyone concerned with the formation of scientific knowledge Contributors are Jed Z Buchwald Lorraine Daston Rivka Feldhay Jan Goldstein Gerard Jorland Doris Kauffman Bruno Latour Theodore M Porter Hans J rg Rheinberger Marshall Sahlins and Peter Wagner

Biographies of Scientific Objects Lorraine Daston, 2000 *Biographies in the History of Physics* Christian Forstner, Mark Walker, 2020-07-22 This book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects institutions and concepts What is a biography Can biographies also be written for non human subjects like scientific instruments institutions or concepts The respective chapters of this book discuss these controversial questions using examples from the history of physics By approaching biography as metaphor it transcends the boundaries between various perspectives on the history of physics and enriches our grasp of the past **Perspectives on Chemical**

Biography in the 21st Century Isabel Malaquias, Peter J. T. Morris, 2019-01-14 Overlooked even despised by historians of chemistry for many years the genre of biography has enjoyed a revival since the beginning of this century The key to its renaissance is the use of the biographical form to provide a contextual analysis of important themes in contrast to the uncritical almost hagiographic lives of chemists written in the earlier part of the twentieth century Bringing together the contributions of scholars active in several different countries *Perspectives on Chemical Biography in the 21st Century* leads the reader through emerging questions around sources and the generic problems faced by authors of biographies before moving on to discuss aspects more related with physical theoretical and inorganic chemistry and facets of 19th century chemistry In contrast to the letters and diaries of earlier chemists we are now faced with scientists who communicate by telephone and email and compose their documents on computers Are we facing a modern equivalent of the destruction of the

Library of Alexandria where all our sources are wiped out electronically The Genealogy of a Gene Myles W. Jackson, 2015-02-20 The history of the CCR5 gene as a lens through which to view such issues as intellectual property Big Pharma personalized medicine and race and genomics In The Genealogy of a Gene Myles Jackson uses the story of the CCR5 gene to investigate the interrelationships among science technology and society Mapping the varied genealogy of CCR5 intellectual property natural selection Big and Small Pharma human diversity studies personalized medicine ancestry studies and race and genomics Jackson links a myriad of diverse topics The history of CCR5 from the 1990s to the present offers a vivid illustration of how intellectual property law has changed the conduct and content of scientific knowledge and the social political and ethical implications of such a transformation The CCR5 gene began as a small sequence of DNA became a patented product of a corporation and then when it was found to be an AIDS virus co receptor with a key role in the immune system it became part of the biomedical research world and a potential moneymaker for the pharmaceutical industry When it was further discovered that a mutation of the gene found in certain populations conferred near immunity to the AIDS virus questions about race and genetics arose Jackson describes these developments in the context of larger issues including the rise of biocapitalism the patentability of products of nature the difference between U S and European patenting approaches and the relevance of race and ethnicity to medical research *New Philosophical Perspectives on Scientific Progress* Yafeng Shan, 2022-11-01 This collection of original essays offers a comprehensive examination of scientific progress which has been a central topic in recent debates in philosophy of science Traditionally debates over scientific progress have focused on different methodological approaches notably the epistemic and semantic approaches The chapters in Part I of the book examine these two traditional approaches as well as the newly revived functional and newly developed noetic approaches Part II features in depth case studies of scientific progress from the history of science The chapters cover individual sciences including physics chemistry evolutionary biology seismology psychology sociology economics and medicine Finally Part III of the book explores important issues from contemporary philosophy of science These chapters address the implications of scientific progress for the scientific realism anti realism debate incommensurability values in science idealisation scientific speculation interdisciplinarity and scientific perspectivalism *New Philosophical Perspectives on Scientific Progress* will be of interest to researchers and advanced students working on the history and philosophy of science What Reason Promises Wendy Doniger, Peter Galison, Susan Neiman, 2016-06-20 This collection demonstrates the range of approaches that some of the leading scholars of our day take to basic questions at the intersection of the natural and human worlds The essays focus on three interlocking categories Reason stakes a bigger territory than the enclosed yard of universal rules Nature expands over a far larger region than an eternal category of the natural And history refuses to be confined to claims of an unencumbered truth of how things happened **Hermeneutic Realism** Dimitri Ginev, 2016-08-24 This study recapitulates basic developments in the tradition of hermeneutic and phenomenological studies of science It focuses on the ways in which

scientific research is committed to the universe of interpretative phenomena. It treats scientific research by addressing its characteristic hermeneutic situations and uses the following basic argument in this treatment. By demonstrating that science's epistemological identity is not to be spelled out in terms of objectivism, mathematical essentialism, representationalism, and foundationalism, one undermines scientism without succumbing scientific research to procedures of normative democratic control that threaten science's cognitive autonomy. The study shows that in contrast to social constructivism, hermeneutic phenomenology of scientific research makes the case that overcoming scientism does not imply restrictive policies regarding the constitution of scientific objects. St. Andrew's Society of Philadelphia, 1907 **The Journal of Philosophy**, 1922. Covers topics in philosophy, psychology, and scientific methods. Vols. 31 include a Bibliography of philosophy, 1933. *Trafficking Materials and Gendered Experimental Practices*, Maria Rentetzi, 2008. Maria Rentetzi surveys the experimental practices of radioactivity research in early twentieth-century Vienna, focusing on radioactive materials, instruments, women's work in physics, and gendered skills. She shows how experimental cultures in radioactivity, scientific practices employed by gendered subjects who shared a certain material and epistemic style of research, were constructed and reshaped by socialist politics in Vienna at that time. She also explores the different ways experimental practices affected men and women in laboratory sciences. Rentetzi expands the notion of material culture to include not only instruments and objects but also materials that operated as both commodities and objects of scientific inquiry. She tells a multifaceted story of how purified radium ended up on laboratory benches and who extracted and isolated it from tons of residues: the individuals who designed experiments and instruments for probing radium's properties and those who carried radium outside of the physics laboratory and into the clinic and medical amphitheatres. Rentetzi examines how the architecture of the laboratory affected men's and women's scientific work and the way in which its urban setting reflected assumptions about scientific cross-disciplinary collaborations. Following the circulation of radium and the pursuit of power through strategies of partnership and collaboration, Rentetzi redraws paths of scientific exchange and transfers the reader from scientific laboratories to hospitals and from academic to industrial sites. **An Historical Catalogue of the St. Andrew's Society of Philadelphia, with Biographical Sketches of Deceased Members, 1749-1913**

Nuncius, 2009 **The Object**, Antony Hudek, 2014. Discussions of the object as a key to understanding central aspects of modern and contemporary art. Artists increasingly refer to post-object based work, while theorists engage with material artifacts in culture. A focus on object-based learning treats objects as vectors for dialogue across disciplines. Virtual imaging enables the object to be abstracted or circumvented, while immaterial forms of labor challenge materialist theories. This anthology surveys such reappraisals of what constitutes the objectness of production with art as its focus. Among the topics it

examines are the relation of the object to subjectivity distinctions between objects and things the significance of the object's transition from inert mass to tool or artifact and the meanings of the everyday in the found object repetition in the replicated or multiple object loss in the absent object and abjection in the formless or degraded object It also explores artistic positions that are anti object theories of the experimental liminal or mental object and the role of objects in performance The object becomes a prism through which to reread contemporary art and better understand its recent past Artists surveyed include Georges Adagbo Art in Ruins Iain Baxter Louise Bourgeois Pavel Bichler Lygia Clark Claude Closky Brian Collier Jimmie Durham Fischli Weiss Luca Frei Meschac Gaba Isa Genzken Gruppe Geflecht Eva Hesse Mike Kelley John Latham Antje Majewski Gustav Metzger Cady Noland Gabriel Orozco Adrian Piper Falke Pisano Eva Rothschild Aura Satz Kenneth Snelson Hito Steyerl Josef Strau Alina Szapocznikow Jolle Tuerlinckx Erwin Wurm Writers include Homi K Bhabha Jack Burnham Ewa Lajer Burcharth Lynne Cooke Gillo Dorfles Jean Fisher Ferreira Gullar Charles Harrison Paulo Herkenhoff Julia Kristeva Bruno Latour Bracha Lichtenberg Ettinger Jean Francois Lyotard Lev Manovich Ursula Meyer Bruno Munari Georges Perec Hans Jorg Rheinberger Dieter Roelstraete Howard Singerman Nancy Spector Marcus Steinweg Anne Wagner Gerard Wajcman Slavoj Zizek Material Culture Review ,2012
