Biological Effects Of External Electrostatic Field:

Biological Effects of External Electrostatic Field Hayk Harutyunyan, 2014-10-20 The investigations on the influence of external electrostatic fields on biological objects and particularly on the human health have been initiated since 1960s A multitude of studies have been performed on whether the electric fields generated by electrical installations represent any kind of health risk Nevertheless till now the data on exposure of electrostatic field are insufficient to draw conclusions regarding the possibility of health effects Results obtained in some investigations are inconstant this impede to draw the overall picture of alterations of biological processes and to understand the nature of interactions of this factor with live objects Anyway it seems that interactions of external electrostatic field with an organism are much deeper than it appears on the first glance Alterations in proteome oxidative processes and blood clotting rate after exposure to electrostatic field were fragmentary observed earlier This monograph mainly is devoted to the study of relationships between these processes as well as given some assumptions about the causes of variability of the data obtained in studies of the biological effects of external electrostatic fields

Biological Effects of Magnetic and Electromagnetic Fields S. Ueno, 2007-07-23 The International Symposium on Biological Effects of Magnetic and Electromagnetic Fields was held from September 3-4 1993 at Kyushu University in Fukuoka Japan Originally it was only intended to be an informal gathering of many scientists who had accepted my invitation to visit Kyushu University after the XXIVth General Assembly of the International Union of Radio Science URSI held in Kyoto prior to our symposium However since so many distinguished scientists were able to come it was decided that a more formal symposium would be possible It was a very productive symposium and as a result many of the guests consented that it would be a good idea to gather all the information put forth at the meeting and have it published In addition although they were unfortunately unable to attend the symposium many other distinguished scientists had also expressed their wish to contribute to this effort and in so doing help to increase understanding in this as yet relatively immature field of science The question of both positive and negative effects of magnetic and electromagnetic fields on biological systems has become more and more important in our world today as they

Biological and Health Effects from Exposure to Power-line Frequency Electromagnetic Fields Hiraku Takebe, 2001 The possible health effects of electromagnetic EMF from high voltage electric power lines have been discussed since the 1970s The concern was triggered by epidemiological studies in the United States and Europe that suggested a slightly increased incidence of leukaemia and brain tumours occurred among those living and working near high voltage power lines Although studies can indicate an association between factor and effect the studies themselves cannot confirm a cause-effect relationship Whether EMF is producing these ill effects must be confirmed by experimental studies

Biotechnology and Biophysical Aspects of Electromagnetic Fields, Fourth Edition Ben Greenebaum, Frank Barnes, 2018-11-02 The two volumes of this new edition of the Handbook cover the basic biological medical physical and electrical engineering principles They also include experimental results concerning how electric and

magnetic fields affect biological systems both as potential hazards to health and potential tools for medical treatment and scientific research They also include material on the relationship between the science and the regulatory processes concerning human exposure to the fields Like its predecessors this edition is intended to be useful as a reference book but also for introducing the reader to bioelectromagnetics or some of its aspects **FEATURES** New topics include coverage of electromagnetic effects in the terahertz region effects on plants and explicitly applying feedback concepts to the analysis of biological electromagnetic effects Expanded coverage of electromagnetic brain stimulation characterization and modeling of epithelial wounds and recent lab experiments on at all frequencies Section on background for setting standards and precautionary principle Discussion of recent epidemiological laboratory and theoretical results including WHO IARC syntheses of epidemiological results on both high and low frequency fields IITRI lab study of cancer in mice exposed to cell phone like radiation and other RF studies All chapters updated by internationally acknowledged experts in the field
