

Biology 9
Endocrine System Lab

Objectives:

- Observe the microscopic anatomy of the major endocrine glands.
- Be able to identify the major endocrine glands and the hormones they secrete.
- Learn the target organs and actions of the major hormones.

PART 1: Go to the endocrine system histology page of JayDoc Histoweb at <http://www.kumc.edu/instruction/medicine/anatomy/histoweb/endo/endo.htm>. You can also go directly there from the link at the instructor's web page. The links to the images you are required to view are located on the left side of the screen. Notice that you may need to move the vertical bar dividing the screen to the right in order to see each slide in its entirety. Be sure to at least skim the description for each image so you understand what you are looking at.

1. Pituitary Gland

- View images 1 and 2 of the pituitary gland. **SKETCH** the overall structure of the pituitary gland and **LABEL** the anterior pituitary and posterior pituitary.

- **NAME** the two hormones secreted by the posterior pituitary and **STATE THEIR FUNCTIONS**.

- _____
- _____

- For each target gland/tissue in the figure below, fill in the correct anterior pituitary hormone that acts on it.
- Also make sure to **HIGHLIGHT** the three tropic hormones.

Biology 9 Endocrine System Lab Answers:

Background Lesions in Laboratory Animals E-Book Elizabeth Fiona McInnes, 2011-10-24 Background Lesions in Laboratory Animals will be an invaluable aid to pathologists needing to recognize background and incidental lesions while examining slides taken from laboratory animals in acute and chronic toxicity studies or while examining exotic species in a diagnostic laboratory. It gives clear descriptions and illustrations of the majority of background lesions likely to be encountered. Many of the lesions covered are unusual and can be mistaken for treatment related findings in preclinical toxicity studies. The Atlas has been prepared with contributions from experienced toxicological pathologists who are specialists in each of the laboratory animal species covered and who have published extensively in these areas over 600 high definition top quality color photographs of background lesions found in rats, mice, dogs, minipigs, non-human primates, hamsters, guinea pigs and rabbits. A separate chapter on lesions in the reproductive systems of all laboratory animals written by Dr Dianne Creasy, a world expert on testicular lesions in laboratory animals, a chapter on common artifacts that may be observed in histological glass slides, extensive references to each lesion described, aging lesions encountered in all laboratory animal species, particularly in rats and mice which are used for carcinogenicity studies. **Teacher's Wraparound Edition:** **Two Biology Everyday Experience** Albert Kaskel, 1994-04-19 The Latest and Best of TESS, 1991 *Archives of Pathology & Laboratory Medicine*, 1989-07 *Bibliography of Medical Reviews*, 1976 **Cumulated Index Medicus**, 1983 **Biology** Eric Strauss, Marilyn Lisowski, 2000 **The Software Encyclopedia 2000** Bowker Editorial Staff, 2000-05 **Tumours of the Mouse** Vladimir Stanislavovich Turusov, Ulrich Mohr, International Agency for Research on Cancer, 1994. The series *Pathology of Tumours in Laboratory Animals* was initiated by the International Agency for Research on Cancer 25 years ago to provide experimental pathologists with a comprehensive coherent source of reference information for use in chronic toxicology research. The first edition of the volume describing tumors of the mouse was issued in 1979. Since then many papers describing new models, new methods of induction, immunohistochemical methods or important new details of old models have been published and efforts have been made to incorporate these data wherever possible. Each chapter deals with tumors of a particular organ or system and describes all neoplasms that have been reported to occur in the organ concerned using the terminology proposed by WHO for human tumors. The structure adopted for each chapter in the first edition: normal structure of the organ in question, classification, morphology and histology of tumors, incidence of spontaneous tumors, methods of inductions, comparative aspects, illustrations and references is retained in the new edition. Separate chapters are included in the second edition of this volume on tumors of the nasal cavities and tumors of the salivary and lacrimal glands. In the first edition these were described in one chapter. Likewise the chapter on tumors of hematopoietic organs is now divided into two independent chapters: one on tumors of the lymphohematopoietic tissue and the other describing histolytic sarcoma. A brief chapter on gallbladder tumors has been added. **Research Grants Index**
