Wechsler,2017-09-29 In *The Qualified Student* Harold S Wechsler focuses on methods of student selection used by institutions of higher education in the United States More specifically he discusses the way that college and university reformers employed those methods to introduce higher education into a broader cross section of America by extending access to an increased number of students from nontraditional backgrounds Implicit in much of this

book is an underlying social and ethical question How legitimate was and is higher education s regulation of social mobility Public concern over colleges and universities practices became inevitable once they became regulators between social classes The challenging of colleges admissions policies in the courts augments similar concerns that have been present in legislatures for decades The volume is divided into three main sections Prerequisites Columbia and the Selective Function and Implications It focuses mainly on four universities The University of Michigan Columbia University the University of Chicago and the City University of New York Wechsler maintains that unlike other universities these institutions were pacesetters they did not adopt a new policy simply because some other college had already adopted it A new introduction brings the book originally published in 1977 up to date and demonstrates its continuing importance in today s academic world of selective admissions

New frontiers in the neuropsychopharmacology of mental illness Thibault Renoir, Laurence Lanfumey, Maarten Van Den Buuse, 2015-01-28 In recent years mental illnesses have become recognized as a huge emotional and financial burden to the individual their relatives and society at large Stress related and mood disorders as well as psychoactive substance abuse are among the disorders associated with most disability in high income countries Suicide which is often attributed to some underlying mental disorders is a leading cause of death among teenagers and young adults At the same time mental disorders pose some of the toughest challenges in neuroscience research There are many different categories of mental disorder as defined and classified by the Diagnostic and Statistical Manual of Mental Disorders DSM IV and the International Statistical Classification of Diseases 10th Revision ICD 10 Despite the ongoing improvements of those widely used manuals the validity and reliability of their diagnoses remain a constant debate However it has now become accepted by the scientific community that mental disorders can arise from multiple sources In that regard both clinical and animal studies looking at gene environment interactions have helped to better understand the mechanisms involved in the pathophysiology as well as the discovery of treatments for mental disorders This Research Topic aims to cover recent progress in research studying how genetic make up and environmental factors such as stress paradigm or pharmacological treatment can contribute to the development of mental disorders such as anxiety depression and schizophrenia This Research Topic also seeks to highlight studies looking at affective like disorders following the intake of drugs of abuse We also welcome all research articles review papers brief communications and commentary on topics related to the broad field of Neuropsychopharmacology
