(Chapter – 10)(Cell Cycle and Cell Division)

(Class – XI)

Question 1:

What is the average cell cycle span for a mammalian cell?

Answer 1:

The average cell cycle span for a mammalian cell is approximately 24 hours.

Question 2:

Distinguish cytokinesis from karyokinesis.

Answer 2:

| Cytokinesis | | Karyokinesis | |
|-------------|---|--------------|--|
| (i) | Cytokinesis is the biological process involving the division of a cell's cytoplasm during mitosis or meiosis. | (i) | Karyokinesis is the biological process involving the division of a cell's nucleus during mitosis or meiosis. |
| (ii) | It is divided into four stages – prophase, metaphase, anaphase, and telophase. | (ii) | Stages such as prophase, metaphase, anaphase, and telophase are not present in karyokinesis. |

Question 3:

Describe the events taking place during interphase.

Answer 3:

Interphase involves a series of changes that prepare a cell for division. It is the period during which the cell experiences growth and DNA replication in an orderly manner. Interphase is divided into three phases.

- G₁ phase
- S phase
- G₂ phase

G₁ phase – It is the stage during which the cell grows and prepares its DNA for replication. In this phase, the cell is metabolically active.

S phase – It is the stage during which DNA synthesis occurs. In this phase, the amount of DNA (per cell) doubles, but the chromosome number remains the same.

G₂ phase – In this phase, the cell continues to grow and prepares itself for division. The proteins and RNA required for mitosis are synthesised during this stage.

Question 4:

What is G₀ (quiescent phase) of cell cycle?

Answer 4:

G₀ or quiescent phase is the stage wherein cells remain metabolically active, but do not proliferate unless called to do so. Such cells are used for replacing the cells lost during injury.

Question 5:

Why is mitosis called equational division?

Answer 5:

Mitosis is the process of cell division wherein the chromosomes replicate and get equally distributed into two daughter cells. The chromosome number in each daughter cell is equal to that in the parent cell, i.e., diploid. Hence, mitosis is known as equational division.

Biology Chapter 10 Packet:

Biostatistical Design and Analysis Using R Dr Murray Logan, 2011-09-20 R the statistical and graphical environment is rapidly emerging as an important set of teaching and research tools for biologists This book draws upon the popularity and free availability of R to couple the theory and practice of biostatistics into a single treatment so as to provide a textbook for biologists learning statistics R or both An abridged description of biostatistical principles and analysis sequence keys are combined together with worked examples of the practical use of R into a complete practical guide to designing and analyzing real biological research Topics covered include simple hypothesis testing graphing exploratory data analysis and graphical summaries regression linear multi and non linear simple and complex ANOVA and ANCOVA designs including nested factorial blocking split plot and repeated measures frequency analysis and generalized linear models Linear mixed effects modeling is also incorporated extensively throughout as an alternative to traditional modeling techniques The book is accompanied by a companion website www.wiley.com/go/logan_r with an extensive set of resources comprising all R scripts and data sets used in the book additional worked examples the biology package and other instructional materials and links

Learning R Richard Cotton, 2013-09-09 Learn how to perform data analysis with the R language and software environment even if you have little or no programming experience With the tutorials in this hands on guide you will learn how to use the essential R tools you need to know to analyze data including data types and programming concepts The second half of Learning R shows you real data analysis in action by covering everything from importing data to publishing your results Each chapter in the book includes a quiz on what you've learned and concludes with exercises most of which involve writing R code Write a simple R program and discover what the language can do Use data types such as vectors arrays lists data frames and strings Execute code conditionally or repeatedly with branches and loops Apply R add on packages and package your own work for others Learn how to clean data you import from a variety of sources Understand data through visualization and summary statistics Use statistical models to pass quantitative judgments about data and make predictions Learn what to do when things go wrong while writing data analysis code
