

Chapter 13**Genetic Engineering****Section 13–1 Changing the Living World** (pages 319–321)

This section explains how people use selective breeding and mutations to develop organisms with desirable characteristics.

Selective Breeding (pages 319–320)

- What is meant by selective breeding? Only animals and plants with desired characteristics are allowed to produce the next generation.
- Circle the letter of each organism that has been produced by selective breeding.
☒ a. horses ☒ b. dogs ☒ c. cats ☒ d. potatoes
- Who was Luther Burbank? He was a selective plant breeder who developed disease-resistant potatoes to help fight potato blight in Ireland, as well as over 800 varieties of other plants.
- Complete the compare-and-contrast table of types of selective breeding.

SELECTIVE BREEDING

Type	Description	Examples
Hybridization	Crossing dissimilar individuals to bring together the best of both organisms	Disease-resistant Burbank potato
Inbreeding	The continued breeding of individuals with similar characteristics	Maintaining dog breeds

- Is the following sentence true or false? Hybrids are often hardier than either of the parents. true
- What two plant traits did Luther Burbank try to combine in his crosses?
 - Disease resistance
 - Food-producing capacity
- Is the following sentence true or false? To maintain the desired characteristics of a line of organisms, breeders often use hybridization. false

Jimenez-Lopez, 2017-12-06 The seed can be considered the most important plant reproductive element as a dispersal unit for a successful reproduction in all gymnosperms and flowering plants The formation of the seed is part of the process of

reproduction in seed plants starting with a mature ovule and following with the fertilization by pollen and some growth within the mother plant to the final outcome of an embryo developed from the zygote the seed coat from the integuments of the ovule and a nurturing endosperm in several species Thanks to this key element as it is the seed the spermatophytes now dominate all types of biological niches on land from forests to grasslands both in hot and cold climates In this metadata information era we have the chance for a deeper understanding of seed physiological and developmental processes in order to provide the fundamental basis for making plant seed biology research relevant and productive coping with future challenges
