Biology is the study of life.

Life: Something that displays the properties of life

Properties of Life Shared by all Organisms are:

1. **Order:** Living cells are the basis of order. For instance, one could see the highly ordered structure of a sunflower if seeing it up close.
2. **Reproduction**
3. **Growth and Development** of all organisms is caused by DNA.
4. **Energy Processing** when an animal eats or a plant photosynthesizes.
5. **Response to the Environment** All organisms respond to stimuli. For example, a venus fly trap quickly closes in response to a damselfly landing on it.
6. **Regulation** of an organism's internal environment within the limits that sustain life. A lemur, for example, will sunbathe to raise its body temperature on cold mornings.
7. **Evolutionary Adaptation** evolves over the course of generations due to individuals most fit for their environment reproduce the greatest.

Autotrophs make their own food, while heterotrophs must eat to survive. Life begins with cells. Biologists make sense of the large diversity of life by classifying organisms. The code that all living things share are AGCT or adenine (A), cytosine (C), guanine (G), and thymine (T). The link between unity and diversity of life is evolution by natural selection.
