

# BIO CH 9 STUDY GUIDE

- **Why don't cells grow as large as they want? What problem do they face as their size increases?**
  - Larger cells place more demand on its DNA
  - Larger cells are less efficient in moving nutrients and waste
- **Understand how surface-area to volume ratio helps us to understand cell size**
  - Cells with a high surface area to volume ratio is able to sustain itself more easily
  - smaller cells transport substances easier
- **Contrast asexual and sexual reproduction**
  - Asexual-
    - one parent
    - uses fission
    - very little change of genetic variation
  - Sexual-
    - Two parents
    - uses meiosis
    - genetic variation in offspring
  - Both-
    - Forms of reproduction
    - involves plants, fungi and animals
    - produces offspring
- **Understand anatomy of a chromosome**
  - Dna - genetic code / double helix
  - histone protein - proteins presents in the chromatins
  - chromatin - long, coiled, thread-like structure / relaxed form of DNA in the nucleus of the cell
  - coils -
  - nucleosome -
  - sister chromatids - structure that contains identical DNA copies that is formed during DNA replication
  - centromere - cell structure that joins two sister chromatids / holds chromosomes together
  - chromosomes - structure that contains DNA and carries genetic material from one generation to another / made up of chromatin
  - complexity is not related to chromosome number
  - 4 chromosomes = 8 chromatids
  - Bacteria is a prokaryote and has no nucleus
- **Why is the cell cycle important?**
