## **Bio May June 2014 Paper 2 marking Scheme:**

**Hormones and Economic Behavior** Pablo Brañas-Garza, Levent Neyse, Martin Voracek, Ulrich Schmidt, Monica Capra, 2019-01-29 Behavioral correlates of hormones emphasized by psychologists have captured the attention of economists in the past years Behavioral economists in particular have investigated the possible roles of hormones on economic decision making and behavior as well as social preferences and cognitive abilities Testosterone oxytocin dopamine serotonin and stress hormones are the foremost studied ones in economic contexts Yet the results are mixed and the relationship between hormones and economic behavior is under investigated to this date Hormone levels are measurable and manipulatable e.g. activate or deactivate block The fact that behavioral economics also employs experimental methodology makes it possible to observe both correlational and causal relationships between hormones and economic behavior Since numerous environmental social and biological factors interact with hormone fluctuations capturing the true impacts of hormones on decisions and behavior is challenging Manipulating hormone levels in the body is a method that is used to tackle this issue Such studies compare observed behaviors of hormones or placebo administered participants to determine causal relationships This Research Topic welcomes the studies on the direct or indirect correlates of hormones on economic behavior and decision making to create new insights on the economic consequences of endocrine activity *Population Index Bibliography, Cumulated 1935-1968 by Authors and Geographical Areas* Princeton University.
