BACKGROUND:

Taxonomy

Classification:

Taxonomy: the science of identifying, describing species.

Ranking: a series of related classes

Species: groups of living things populations, geographically

Community: other living species

Dichotomous Key: a key for the identification of organisms based on a series of choices (either/or) describing characters

Kingdoms are the major classification levels. Kingdoms: Prokaryotes (bacteria, plants, fungi, animals, protists, and eukaryotes). Each organism is said to be a member of the kingdom that contains the kingdom's common and distinctive traits. The study of different organisms, including the study of organisms that live in the same area, is called ecology. The study of the interactions between organisms and their environment is called ecology.
