- It helps in identification of new organism.
- Classification helps in knowing the relationship amongst different groups of organisms.
- The organism of past cannot be studied without a proper system of classification.

Types of Classification System :-

1. Aristotle's classification System :- The Greek scientist, Aristotle (384-322 B.C.), was one of the first scientist to organize living things, thus among other things he studied, Aristotle was a taxonomist.

Aristotle developed the first classification system which divided all known organisms into **two** groups **PLANTS** and **ANIMALS**. Aristotle then divided each of these main groups into three smaller groups.

manageable format that focuses on the key questions and core concepts of psychology Introductory psychology covers such a
wide range of topics and issues that it becomes difficult for readers to see the forest for the trees To make key psychological
concepts more meaningful the authors found inspiration in a classic chess study This study showed that experts did no better
than novices at remembering the location of pieces on a chess board when they were placed randomly Only when the
patterns represented actual game situations did they make sense and therefore become more easily memorable for the
experts Clearly meaningful patterns are easier to remember and understand than random arrangements and Psychology
applies this by presenting the field of psychology in meaningful patterns to enhance comprehension These concepts are then
applied to readers own lives study skills and the world around them Finally Psychology integrates a cross cultural and
multicultural perspective to make psychology meaningful for everyone For anyone interested in Introductory Psychology
