Agro-Industrial Residues by Biological Approaches Xiaoyan Liu,Zhipeng Wang,Myeong-Sok Lee,Jun Xia,Shangyong Li,2025-12-04 Excessive low cost residues were generated in huge amounts along the whole agro industrial chain from agricultural product harvest to further processing Few residues have been processed and redirected into the industrial chain while most of the residues were discarded leading to a huge amount of resource wastes and serious environmental problems It is well known that the discarded low cost residues contain a considerable amount of proteins lipids and available carbohydrates thus valorization of these residues by biological approaches including fermentation and enzymatic catalysis has drawn great attention Utilizing these residues for producing high value added products has recently been recommended to replace costly food materials and assumed to have growing economic importance Up to now there is still a scarcity of established economically feasible processes based on biological approaches Unlike chemical processes biological processing for agro industrial residues required specialized pretreatment corresponding with the subsequent bioprocess while the present universal pretreatment methods were not feasible Developing optimal pretreatment methods of various residues or integrating pretreatment with the subsequent bioprocess is of great importance to improve the production efficiency of value added products From another aspect establishing strategies of recovering bioactive molecules from residues is critical for implementing a sustainable bio based economy and these functional ingredients such as unsaturated fatty acid antioxidants antimicrobial compounds biological insecticides enzymes or oligosaccharides are currently under study The present Research Topic aims to collect the recent advances of value added products from agro industrial residues by biological approaches The designated residues can be derived from the whole industry chains of crops vegetables fruits forest products and aquatic products The topic reflects the multidisciplinary character of the field including biochemistry molecular biology microbiology and biotechnology We encourage the submission of Original Research articles Brief Research Reports Perspectives and Reviews Themes covered in this Research Topic include but are not limited to New characterized enzymes or microorganism for converting agro industrial residues to value added products Biological pretreatment of residues Bioprocess design strain screening and metabolic engineering for improving the yield of value added products Converting residues into newly developing molecules with agricultural activity such as biological insecticides biological herbicides and biostimulants Design and application of new bioprocess for agro industrial residues undeveloped Novel biorefinery approaches Applications of solid state fermentation to produce value added products **Laboratory Manual for Biology 105** Sylvia S. Biological Engagement Programs: Reducing Threats and Strengthening Global Health Security Through Scientific

Collaboration Jeanne M. Fair, Hillary H. Carter, Nathan Wolfe, 2017-09-13 Biological engagement programs are a set of projects or activities between partner countries that strengthen global health security to achieve mutually beneficial outcomes Engagement programs are an effective way to work collaboratively towards a common threat reduction goal usually with a strong focus on strengthening health systems and making the world a safer place Cooperative programs are built upon trust and sharing of information and resources to increase the capacity and capabilities of partner countries Biological engagement programs reduce the threat of infectious disease with a focus on pathogens of security concern such as those pathogens identified by the U S Government as Biological Select Agent and Toxins These programs seek to develop technical or scientific relationships between countries to combat infectious diseases both in humans and animals Through laboratory biorisk management diagnostics pathogen detection biosurveillance and countermeasure development for infectious diseases deep relationships are fostered between countries Biological engagement programs are designed to address dual use issues in pathogen research by promoting responsible science methodologies and cultures Scientific collaboration is a core mechanism for engagement programs are designed to strengthen global health security including prevention of avoidable epidemics detection of threats as early as possible and rapid and effective outbreak response This Research Topic discusses Biological Engagement Programs highlighting the successes and challenges of these cooperative programs Articles in this topic outlined established engagement programs as well as described what has been learned from historical cooperative engagement programs not focused on infectious diseases Articles in this topic highlighted selected research trainings and programs in Biological Engagement Programs from around the world This Topic eBook first delves into Policies and Lessons Learned then describes Initiatives in Biosafety the core of this work documents Cooperative Research Results from the field then lastly the Topic lays out potential Future Directions to the continued success of the World s cooperative science in reducing the threat of infectious diseases [Visual and Non-Visual Effects of Light](#) Agnieszka Wolska, Dariusz Sawicki, Małgorzata Tafil-Klawe, 2020-07-29 The introduction of artificial lighting extends the time of wakefulness after dark and enables work at night thus disturbing the human circadian rhythm The understanding of the physiological mechanisms of visual and non visual systems may be important for the development and use of proper light infrastructure and light interventions for different workplace settings especially for shift work conditions Visual and Non Visual Effects of Light Working Environment and Well Being presents the impact of lighting in the working environment on human health well being and visual performance The physiological explanation of the visual and non visual effects of light on humans which discusses the biological bases of image and non image forming vision at the cellular level may be of particular interest to any professional in the field of medicine physiology and biology It is one of the intentions of this book to put forward some recommendations and examples of lighting design which take into account both the visual and non visual effects of light on humans These may be of particular interest to any professional in the field of lighting occupational safety

and health and interior design What effects on health can a light overdose or light deficiency have What is bad light The authors of the monograph provide answers to these questions Just as for a physicist the dual nature of light comprises an electromagnetic wave and a photon the duality of light for a physician comprises visual and non visual effects Prof Jacek Przybylski Medical University of Warsaw This is a unique publication in the field of lighting technology The authors have skillfully combined both the technical and biomedical aspects involved which is unprecedented in the literature available As a result an important study has been created for many professional groups with a significant impact on the assessment of risks associated with LED sources Prof Andrzej Zaj c Military University of Technology Warsaw

Design Change to Fishery Independent Surveys: When to Adjust and How to Account For It Fabio

Campanella,Ben Scoulding, Nathan Bacheler,Kyle Shertzer,2025-03-07 Fishery independent surveys provide crucial information for monitoring and assessing marine fish stocks Their utility can largely be attributed to sampling procedures that are consistent across space and time such that observed dynamics can reasonably be assumed to reflect those of the population or community being studied However sometimes changes to the survey design become desirable or necessary They may be desirable if the benefits of modification outweigh the benefits of consistency for example with improvements in sampling technology or efficiency revised survey priorities or increased funding that allows for greater spatial coverage or temporal resolution In other cases changes to the survey design may not be desirable but necessary for example when specific supplies or equipment become unobtainable or with reductions in funding ship time or human resources
