Gifted?: The shift to enrichment, challenge and equity Morgan Whitfield, 2024-07-19 Gifted and talented is a zombie It is dead but still walking around There are new labels to stratify students more able significantly able high aptitude learners New labels do not equal new thinking The concept of gifted is still stubbornly embedded in our educational structures with its legacy of social immobility racism and sexism Students can be more able when they have more financial resources more access more visibility or more cultural acceptance There are pervasive narratives that educators should prioritise extension for some students and not others We can dispel the myth that pitching lessons judiciously to middle ability and then differentiating up and down is effective This book explores how we can provide every student with rigorous challenge Challenge for all is an inclusive approach to teaching whereby every student is invited and given the tools to reach a place of mastery This can be through project based learning Harkness round tables oracy adaptive teaching inclusive enrichment programs dynamic classroom strategies and a schoolwide mission for equity Educators can embed powerful knowledge into the curriculum reimagine teaching to the top and stretch learners through personalised and responsive instruction The shift to enrichment challenge and equity creates magnificent possibilities The message to all students is you belong here

*Biology Living Systems*, 1994 **Evolvability** Thomas F. Hansen, David Houle, Mihaela Pavlicev, Christophe Pélabon, 2023-06-27 Essays on evolvability from the perspectives of quantitative and population genetics evolutionary developmental biology systems biology macroevolution and the philosophy of science Evolvability the capability of organisms

to evolve wasn't recognized as a fundamental concept in evolutionary theory until 1990. Though there is still some debate as to whether it represents a truly new concept, the essays in this volume emphasize its value in enabling new research programs and facilitating communication among the major disciplines in evolutionary biology. The contributors, many of whom were instrumental in the development of the concept of evolvability, synthesize what we have learned about it over the past thirty years. They focus on the historical and philosophical contexts that influenced the emergence of the concept and suggest ways to develop a common language and theory to drive further evolvability research. The essays, drawn from a workshop on evolvability hosted in 2019–2020 by the Center of Advanced Study at the Norwegian Academy of Science and Letters in Oslo, provide scientific and historical background on evolvability. The contributors represent different disciplines of evolutionary biology, including quantitative and population genetics, evolutionary developmental biology, systems biology, and macroevolution, as well as the philosophy of science. This plurality of approaches allows researchers in disciplines as diverse as developmental biology, molecular biology, and systems biology to communicate with those working in mainstream evolutionary biology. The contributors also discuss key questions at the forefront of research on evolvability.

Professors and students appreciate the low cost of this title and that it is written for students who are not biology majors.

**The Philosophy of Artificial Life** Margaret A. Boden, 1996

The aim of this series is to bring together important recent writings in major areas of philosophical inquiry, selected from a variety of sources, mostly periodicals, which may not be conveniently available to the university student or the general reader. The editor of each volume contributes an introductory essay on the items chosen and on the questions with which they deal. A selective bibliography is appended as a guide to further reading. This volume offers a selection of the most important philosophical work in the new and fast-growing interdisciplinary area of artificial life; it will set the agenda for future study and research.

**Artificial Life: A Life research** aims to synthesize the characteristics of life by artificial means, particularly employing computer technology. The essays chosen explore such fascinating themes as the nature of life, the relation between life and mind, and the limits of technology. The first

two papers one of which is the classic A Life manifesto by Christopher Langton provide a general overview of the subject and compare it with artificial intelligence AI in Part II the contributors describe examples of A Life research Part III discusses various explanatory strategies in A Life and relates them to approaches in AI and cognitive science while Part IV focuses on the concept of life in general Finally Part V explores A Life s relation to functionalism and the feasibility of strong A Life
