**Mass and Weight**

Learning physics is learning the connections among concepts in nature, and also learning to distinguish between closely-related concepts. Velocity and acceleration, previously treated, are often confused. Similarly in this chapter, we find that mass and weight are often confused. They aren't the same! Please review the distinction between mass and weight in your textbook. To reinforce your understanding of this distinction, circle the correct answers below.

Comparing the concepts of mass and weight, one is basic—fundamental—depending only on the internal makeup of an object and the number and kind of atoms that compose it. The concept that is fundamental is [mass] [weight].

The concept that additionally depends on location in a gravitational field is [mass] [weight].

[Mass] [Weight] is a measure of the amount of matter in an object and only depends on the number and kind of atoms that compose it.

It can correctly be said that [mass] [weight] is a measure of "laziness" of an object.

[Mass] [Weight] is related to the gravitational force acting on the object.

[Mass] [Weight] depends on an object's location, whereas [mass] [weight] does not.

In other words, a stone would have the same [mass] [weight] whether it is on the surface of Earth or on the surface of the Moon. However, its [mass] [weight] depends on its location.

On the Moon's surface, where gravity is only about  $1/6^{\text{th}}$  Earth gravity [mass] [weight]  
[both the mass and the weight] of the stone would be the same as on Earth.

While mass and weight are not the same, they are [directly proportional] [inversely proportional] to each other. In the same location, twice the mass has [twice] [half] the weight.

The Standard International (SI) unit of mass is the [kilogram] [newton], and the SI unit of force is the [kilogram] [newton].

In the United States, it is common to measure the mass of something by measuring its gravitational pull to Earth, its weight. The common unit of weight in the U.S. is the [pound] [kilogram] [newton].

When I step on a weighing scale, two forces act on it; a downward pull of gravity, and an upward support force. These equal and opposite forces effectively compress a spring inside the scale that is calibrated to show weight. When in equilibrium, my weight =  $mg$ .

*Physlet Physics 3E Volume I* Wolfgang Christian and Mario Belloni, 2019-07-11 Physlet Physics 3E Volume I contains a collection of exercises spanning the introductory physics sequence. These exercises use computer animations generated in JavaScript applets to show physics content on desktop and laptop computers. We call these Java applets Physlets. Physics content simulated with JavaScript applets written at Davidson College. Every chapter of Physlet Physics contains three quite different Physlet based exercises: Illustrations, Explorations, and Problems. Illustrations are designed to demonstrate physical concepts. Explorations are tutorial in nature. Problems are interactive versions of the kind of exercises typically assigned for homework. This electronic book contains the narrative to all 800 exercises and links to the interactive content. The interactive content requires a desktop, laptop, tablet, or phone and a JavaScript enabled browser to run. The first edition of Physlet Physics was an interactive book and CD for the teaching of introductory modern physics and quantum mechanics on the college level. Physlet Physics was originally published as part of Prentice Hall's Series in Educational Innovation. The second edition of Physlet Physics represented a major change in how the 800 Physlet based interactive materials were delivered to teachers and students alike. Instead of accessing materials off of the CD that came with the first edition, accessed the Physlet Physics 2E AAPT ComPADRE site via a Java enabled browser on desktop and laptop computers. For the third edition of Physlet Physics, all applets are now JavaScript and can be accessed on any device and browser via links in this book or directly at <http://compadre.org/physlets>. The JavaScript based materials described in this book run on tablets and phones as well as desktop and laptop computers.

*Key Competences in Physics Teaching and Learning* Tomasz Greczyło, Ewa Dębowska, 2016-09-22. This book presents a selection of the best contributions to GIREP EPEC 2015, the Conference of the International Research Group on Physics Teaching, GIREP and the European Physical Society's Physics Education Division, EPS PED. It introduces readers interested in the field to the problem of identifying strategies and tools to improve physics teaching and learning so as to convey Key Competences and help students acquire them. The main topic of the conference was Key Competences (KC) in physics teaching and learning in the form of knowledge, skills, and attitudes that are fundamental for every member of society. Given the role of physics as a field strongly connected not only to digital competence but also to several other Key

Competences, this conference provided a forum for in-depth discussions of related issues. **High School Physics** Cynthia R. *Conceptual Physical Science Explorations* Suchocki Hewitt (Hewitt), 2003      **Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles** Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research

Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
