Phenomenal Consciousness Peter Carruthers, 2003-10-30 How can phenomenal consciousness exist as an integral part of a physical universe How can the technicolour phenomenology of our inner lives be created out of the complex neural activities of our brains Many have despaired of finding answers to these questions and many have claimed that human consciousness is inherently mysterious Peter Carruthers argues on the contrary that the subjective feel of our experience is fully explicable in naturalistic scientifically acceptable terms Drawing on a variety of interdisciplinary resources he develops and defends a novel account in terms of higher order thought He shows that this can explain away some of the more extravagant claims made about phenomenal consciousness while substantively explaining the key subjectivity of our experience Written with characteristic clarity and directness and surveying a wide range of extant theories this book is essential reading for all those within philosophy and psychology interested in the problem of consciousness **Conceptual**

The Web's Awake Philip D. Tetlow, 2007-04-27 The central thesis of The Web's Awake is that the phenomenal growth and complexity of the web is beginning to outstrip our capability to control it directly Many have worked on the concept of emergent properties within highly complex systems concentrating heavily on the underlying mechanics concerned Few however have studied the fundamentals involved from a sociotechnical perspective In short the virtual anatomy of the Web remains relatively uninvestigated The Web's Awake attempts to seriously explore this gap citing a number of provocative yet objective similarities from studies relating to both real world and digital systems It presents a collage of interlinked facts assertions and coincidences which boldly point to a Web with powerful potential for life

Film and Video Finder, 1997, 1997 **Conceptual Physics**, 1985 Rev ed of Conceptual physics a new introduction to your environment 4th ed 1981 **The Gale Encyclopedia of Science**, 2001 Contains 2 000 entries ranging from short definitions to major overviews of concepts in all areas of science **Mental Models across Languages** Pawel Sickinger, 2018-12-15 This book presents a study that triangulates the meanings of expressions across English German and Japanese via their perception based conceptual representations In an online experiment native speakers of the three languages were asked to design visual representations of expressions referring to baldness phenomena These sets of visualizations are used to determine conceptual overlap or distance between expressions in the three languages resulting in lexical conceptual maps for MALE BALDNESS The study is discussed against the background of an embodied perceptual symbol based understanding of linguistic meaning A section of the book further applies this perspective to the issue of translation developing a process model of translation based on the concept of cognitive equivalence The book presents a novel approach to lexical semantics from a cognitive linguistic perspective tested through a methodologically innovative experiment It is a compelling read to scholars in cognitive semantics contrastive semantics embodied cognition and cognitive translation studies Morality Without Foundations Mark Timmons, 1999 Morality Without Foundations investigates

fundamental metaethical questions about the meaning truth and justification of moral thought and discourse Mark Timmons maintains that all versions of descriptivism in ethics particularly certain accounts of moral realism fail He argues instead that a correct metaethical theory should embrace some version of non descriptivism Timmons defends what he calls assertoric non descriptivism which unlike traditional non descriptivist views holds that moral sentences are typically used to make genuine assertions In defending this view he exploits contextual semantics providing him with the semantic flexibility to develop an irrealist account of moral discourse Timmons goes on to support a contextualist moral epistemology completing his overall version of contextualism in ethics Like his foundationalist rivals Timmons recognizes that there are moral beliefs that are epistemically basic in providing a basis for the justification of non basic moral beliefs Yet he agrees with the coherentist in maintaining that there are no intrinsically justified beliefs that can serve as a single foundation for a system of moral knowledge Timmons ultimately finds that regresses of justification of moral belief end with contextually basic beliefs moral beliefs which in the relevant context are responsibly held but in other contexts might not be suitable as regress stoppers Timmons novel defense of morality without foundations offers provocative reading for philosophers working in the areas of ethics epistemology and metaphysics Yet written with the student in mind his lucid presentation of difficult ideas makes this book accessible to students and newcomers to the field of metaethics

The Quantum Self Danah Zohar, 1991-05-24 In *The Quantum Self* Danah Zohar argues that the

insights of modern physics can illuminate our understanding of everyday life our relationships to ourselves to others and to the world at large Guiding us through the strange and fascinating workings of the subatomic realm to create a new model of human consciousness the author addresses enduring philosophical questions Does the new physics provide a basis by which our consciousness might continue beyond death How does the material world for instance ugly inner cities impinge upon our sense of self Is there a subatomic wellspring from which our creativity our empathy with others and our feelings of unity with the inanimate world originate Most important Zohar shows how the vitality of the new physics combats the alienation and fragmentation of twentieth century life and replaces it with a model of reality in which the universe itself may possess a type of consciousness of which human consciousness is one expression
