

Chapter 7, Plug and Chug, page 146, # 35, 37, 39, 41, 43, 45 :

35. Calculate the work done when a force of 4.0 N moves a book 1.2 m. ($1\text{ N}\cdot\text{m}= 1\text{ J}$)

$$\text{Force (F)} = 4.0 \text{ N}$$

$$\text{Distance (d)} = 1.2 \text{ m}$$

$$\theta \text{ (angle)} = 0 \text{ degrees (because the force is applied in the same direction as motion, } \cos(0) \text{ is } 1)$$

$$W = 4.0 \text{ N} \times 1.2 \text{ m} \times 1$$

$$W = 4.8 \text{ joules (J)}$$

37. Show that 40 W of power is required to impart 80 J of energy to something in 2.0 s.

$$P = W/t$$

$$P = 80\text{J}/2.0\text{s} = 40\text{W}$$

39. Show that when a 4.0-kg book is lifted 2.0 m its increase in gravitational potential energy is 80 J. (Don't forget g, which can be expressed in units N/kg, equivalent to m/s^2 .)

$$\Delta PE = m \cdot g \cdot h$$

$$\Delta PE = 4.0 \text{ kg} \cdot 9.81 \text{ m/s}^2 \cdot 2.0 \text{ m}$$

$$\Delta PE = 78.48 \text{ J}$$

41. Show that the kinetic energy of a 1.0-kg hamster running at 3.0 m/s is 4.5 J. [1 J is equivalent to $1\text{ kg}(\text{m/s})^2$]

$$KE = 0.5 \cdot m \cdot v^2$$

$$KE = 0.5 \cdot 1.0 \text{ kg} \cdot (3.0 \text{ m/s})^2$$

$$KE = 0.5 \cdot 1.0 \text{ kg} \cdot 9.0 (\text{m/s})^2$$

$$KE = 4.5 \text{ J}$$

43. Show that 24 J of work is done when a 3.0-kg block of ice is moved from rest to 4.0 m/s.

$$W = \Delta KE$$

$$KE = 0.5 \cdot m \cdot v^2$$

Just in Time Teaching Scott Simkins,Mark Maier,2023-07-03 Just in Time Teaching JiTT is a pedagogical approach that requires students to answer questions related to an upcoming class a few hours beforehand using an online course management system While the phrase just in time may evoke shades of slap dash work and cut corners JiTT pedagogy is just the opposite It helps students to view learning as a process that takes time introspection and persistence Students who experience JiTT come to class better prepared and report that it helps to focus and organize their out of class studying Their responses to JiTT questions make gaps in their learning visible to the teacher prior to class enabling him or her to address learning gaps while the material is still fresh in students minds hence the label just in time JiTT questions differ from traditional homework problems in being designed not only to build cognitive skills but also to help students confront misconceptions make connections to previous knowledge and develop metacognitive thinking practices Students consequently spend more time on course concepts and ideas but also read their textbooks in ways that result in more effective and deeper learning Starting the class with students work also dramatically changes the classroom learning environment creating greater student engagement This book demonstrates that JiTT has broad appeal across the academy Part I provides a broad overview of JiTT introducing the pedagogy and exploring various dimensions of its use without regard to discipline Part II of the book demonstrates JiTT s remarkable cross disciplinary impact with examples of applications in physics biology the geosciences economics history and the humanities Just in Time Teaching article from The Hispanic Outlook in Higher EducationReprinted with permission from Hispanic Outlook in Higher Education Magazine www.hispanicoutlook.com Teaching Physics with the Physics Suite CD Edward F. Redish,2003-02-03 Written by one of the leaders of the Physics Education Research PER movement Teaching Physics is a book for anyone interested in learning how to become a more effective physics teacher Rather than reviewing specific topics in physics with hints for how to teach them and lists of common student difficulties Teaching Physics presents a variety of tools for improving both the teaching and

learning of physics from new kinds of homework and exam problems to surveys for figuring out what has happened in your class to tools for taking and analyzing data using computers and video Teaching Physics is a companion guide to using the Physics Suite an integrated collection of research based instructional materials for lecture laboratory recitation and workshop studio environments But even if you don't use a single element from the Suite Teaching Physics can help you enhance your students learning experience

Quantitative Human Physiology Joseph J Feher, 2017-01-02 Quantitative Human Physiology An Introduction winner of a 2018 Textbook Excellence Award Texty is the first text to meet the needs of the undergraduate bioengineering student who is being exposed to physiology for the first time but requires a more analytical quantitative approach This book explores how component behavior produces system behavior in physiological systems Through text explanation figures and equations it provides the engineering student with a basic understanding of physiological principles with an emphasis on quantitative aspects Winner of a 2018 Textbook Excellence Award College Texty from the Textbook and Academic Authors Association Features a quantitative approach that includes physical and chemical principles Provides a more integrated approach from first principles integrating anatomy molecular biology biochemistry and physiology Includes clinical applications relevant to the biomedical engineering student TENS cochlear implants blood substitutes etc Integrates labs and problem sets to provide opportunities for practice and assessment throughout the course NEW FOR THE SECOND EDITION Expansion of many sections to include relevant information Addition of many new figures and re drawing of other figures to update understanding and clarify difficult areas Substantial updating of the text to reflect newer research results Addition of several new appendices including statistics nomenclature of transport carriers and structural biology of important items such as the neuromuscular junction and calcium release unit Addition of new problems within the problem sets Addition of commentary to power point presentations

Teaching Undergraduate Science Linda C. Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers

whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching
