Concrete In Interfacial Report Rilem Transition Zone:

Interfacial Transition Zone in Concrete J.C. Maso, 1996-05-23 An important state of the art report prepared by RILEM Technical Committee 108 ICC It has been written by a team of leading international experts from the UK USA Canada Israel Germany Denmark South Africa Italy and France **Interfacial Transition Zone in Concrete** J. C. Maso, 1996

Cement-Based Composites Andrzej M. Brandt, 2009-01-29 Cement Based Composites takes a different approach from most other books in the field by viewing concrete as an advanced composite material and by considering the properties and behaviour of cement based materials from this stance It deals particularly but not exclusively with newer forms of cement based materials This new edition takes a critical approach to the subject as well as presenting up to date knowledge Emphasis is given to non conventional reinforcement and design methods problems at the materials interfaces and to the durability of structures High strength composites and novel forms of cement based composites are described in detail After a basic introduction the book explores the various components of these materials and their properties It then deals with mechanical properties and considers characteristics under various loading and environmental conditions and concludes by examining design optimization and economics with particular emphasis on high performance concretes Researchers graduate students and practising engineers will find this book valuable *Durability of Concrete and Cement Composites* Chris L. Page, M M Page, 2007-06-30 Whilst most structures made using concrete and cement based composites have not shown signs of premature degradation there have been notable exceptions In addition there is increasing pressure for new structures to remain in serviceable condition for long periods with only minimal maintenance before being recycled All these factors have highlighted the issues of what affects the durability of these materials in different circumstances and how material properties can be measured and improved Durability of concrete and cement composites summarises key research on these important topics After an introductory chapter the book reviews the pore structure and chemistry of cement based materials providing the foundation for understanding the particular aspects of degradation which are discussed in the following chapters These include dimensional stability and cracking processes chemical and microbiological degradation of concrete corrosion of reinforcing and prestressing steels deterioration associated with certain aggregates effects of frost and problems involving fibre reinforced and polymer cement composites With its distinguished international team of contributors Durability of concrete and cement composites is a standard reference for all those concerned with improving the service life of structures using these materials Analyses a range of materials such as reinforced steel in concrete pre stressed concrete and cement composites Discusses key degradation phenomena such as cracking processes and the impact of cold weather conditions A standard reference for those concerned with improving the service life of structures using concrete and cement based composites **Systematic Approach of Characterisation and Behaviour of Recycled Aggregate Concrete** M. Chakradhara Rao, Sriman Kumar Bhattacharyya, Sudhirkumar V. Barai, 2018-06-16 This book focuses on the utilisation of

construction waste material as coarse aggregate in making concrete. It discusses in detail the behaviour of recycled aggregate under impact load along with other structural applications and explains the various quality improvement techniques for recycled aggregate and recycled aggregate concrete. RAC. The first chapter describes the importance of recycling construction and demolition waste and the status quo of global construction and demolition waste recycling. The second chapter examines the recycled aggregate production methodology. Subsequent chapters address the physical and mechanical characteristics and different research findings as well as the engineering properties of recycled aggregate concrete. Further, the interrelationships among the mechanical properties of recycled aggregate concrete are discussed. The book also explores long term properties like shrinkage and creep, durability properties and microstructural characterisation. It will serve as a valuable resource for researchers and professionals alike.

Concrete Recycling Francois de Larrard, Horacio Colina, 2019-03-04. Francois de Larrard is Scientific Director of the R & D centre of the LafargeHolcim group and Scientific Director of the French national project Recyb ton. He formerly spent almost thirty years at IFSTTAR formerly LCPC. He has been granted both the Robert I Hermite medal and the G H Tattersall award by RILEM and is author of two books including *Concrete Mixture Proportioning* which is also published by Taylor Francis.

Aggregates in Concrete Mark Alexander, Sidney Mindess, Mike Otieno, 2025-12-16. This well established text brings together in one volume current research and information on the selection and use of aggregates in concrete. It gives an overview of aggregate sources, production and availability followed by a detailed treatment of their physical, mechanical and chemical properties. This crucial background is then applied to the use of aggregates in both plastic and hardened concrete and in the overall mix design with emphasis on the influence of aggregates on concrete performance. *Aggregates in Concrete* Second Edition includes a new chapter that deals with sustainability considerations and new material on aggregates in specialised rheological mixes. Special aggregates and their applications are discussed in detail, especially the use of recycled aggregates from CDW and recycled concrete and aggregates derived from industrial and agro waste materials as well as porous aggregates for internal curing of concrete. The main aggregate specifications, standards and tests in use are also detailed. This book is essential for practitioners in concrete while remaining accessible for students in the field.

Investigation of Low Compressive Strengths of Concrete in Paving, Precast and Structural Concrete Study, 2000. This research examines the causes for a high incidence of catastrophically low compressive strengths primarily on structural concrete during the 1997 construction season. The source for the low strengths was poor aggregate paste bond associated with air void clusters and poorly formed cement paste in the interfacial region adjacent to the aggregate. An interaction between the 3synthetic4 air entraining admixtures used as substitutes for vinsol resin and low alkali cements was directly tied to the problem. With high summertime temperatures also contributing to the problem, the 3synthetic4 appear to be more hydrophobic, form thinner walled air bubbles and develop rapid draining bubble flocculations more readily than vinsol resin, all of which can lead to significant reductions in strength.

As an interim measure the Department specified the sole use of vinsol resin air entraining agents along with water reducers as needed in April 1998 and these measures have minimized the incidence of low strengths Petrographic analysis of cores taken from low strength concretes failed to reveal the causes of the low strength problem but SEM microscopy clearly showed the failure mechanism Laboratory testing of concrete mixes with various air entraining admixtures demonstrated an interaction was taking place with one cement and petrographic and chemical analysis of the cements used in the testing implicated alkali sulfates as a potential source of the interaction Testing of the 3synthetic4 air entraining admixtures showed they have substantially different properties compared to vinsol resins Mixtures of the 3synthetics4 and vinsol resin with 50 % or more vinsol resin behaved similarly to vinsol alone **Concrete Library International** ,1999 **ACI Materials**
