Concept Development 34 1 Physics:

Critical Appraisal of Physical Science as a Human Enterprise Mansoor Niaz, 2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientific framework or presuppositions Holton 1969a has deplored the widely accepted myth of experimentalism according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hard core Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2

Modelling-based Teaching in Science Education John K. Gilbert, Rosária Justi, 2016-05-30 This book argues that modelling should be a component of all school curricula that aspire to provide authentic science education for all The literature on modelling is reviewed and a model of modelling is proposed The conditions for the successful implementation of the model of modelling in classrooms are explored and illustrated from practical experience The roles of argumentation visualisation and analogical reasoning in successful modelling based teaching are reviewed The contribution of such teaching to both the learning of key scientific concepts and an understanding of the nature of science are established Approaches to the design of curricula that facilitate the progressive grasp of the knowledge and skills

entailed in modelling are outlined Recognising that the approach will both represent a substantial change from the content transmission approach to science teaching and be in accordance with current best practice in science education the design of suitable approaches to teacher education are discussed Finally the challenges that modelling based education pose to science education researchers advanced students of science education and curriculum design teacher educators public examiners and textbook designers are all outlined

and track conceptual understanding it is useful to have a detailed assessment tool easily used with large classes This study presents the Conceptual Inventory of Natural Selection CINS a distractor driven twenty item multiple choice test that assesses understanding of ten concepts related to natural selection biotic potential stable populations limited natural resources limited survival variation within a population variation inherited differential survival change in populations origin of variation and origin of species Development refinement and field testing of individual CINS items are presented and validity readability reliability and factor analysis of the CINS are described There was significant correlation between student performance on the posttest CINS and end of semester interviews suggesting that the CINS is a useful classroom tool The CINS was used as both a pretest and posttest to determine relative difficulty of the concepts among college students The three most challenging concepts were random origin of variation how populations change over time due to changing proportions of alleles and how new species originate Many students chose distractors including need as a driving force Results support the use of non traditional methods as only students in such classes demonstrated any improvement on the CINS posttest Pre and posttesting with the CINS was also used to assess relative effectiveness of using two types of supplemental reading materials selections from narrative non textbook sources or from other general biology textbooks in a general biology course These results suggest that specific content of readings was more important than style of the readings Implications for teaching both students and pre service teachers are described
