Chapter 8 Rotational Motion Banked Airplanes

An airplane banks as it turns along a horizontal circular path in the air. Except for the thrust of its engines and air resistance, the two significant forces on the plane are gravitational mg (vertical), and lift L (perpendicular to the wings).

Vector Component Analysis:
With a ruler and a pencil, resolve vector L into two perpendicular components, horizontal L_x and vertical L_y . Make these vectors dashed to distinguish them from L .

Circle the correct answers.

1. The velocity of the airplane at any instant is
[along the radius of] [tangent to] its circular path.
2. If L were somehow replaced with L_x and L_y ,
the airplane [would] [would not] behave the
same as being supported by L .
3. Since the airplane doesn't accelerate vertically, component L_y must be
[greater than] [less than] [equal and opposite to] mg .
4. Since the plane continues in circular motion, component L_x must equal [zero] [m^2/r]
and be a [centripetal] [centrifugal] [nonexistent] force. Furthermore, L_x is
[along the radius of] [tangent to] the circular path.

Vector Resultant Analysis:

5. Rather than resolving L into horizontal and
vertical components, use your pencil to
sketch the resultant of mg and L using the
parallelogram rule.
6. The resultant lies in a [horizontal] [vertical]
direction and [toward] [away from] the center
of the circular path. The resultant of mg and L is a
[centripetal] [centrifugal] force.
7. The resultant of mg and L is the same as [L_x] [L_y].

Challenge: Explain in your own words why the resultant of two vectors can be the same as a single component of one of them.

The Conceptual Foundations of Contemporary Relativity Theory John Cowperthwaite Graves,1971 The central conceptual idea of the contemporary theory of general relativity or geometrodynamics is the identification of matter with the structure of space time No entities foreign to space time like masses charges or independent fields are needed and physics thus becomes identical with the geometry of space time This idea implies a philosophical description of the universe that is monistic and organic characterized by an all encompassing interdependence of events Moreover it is an idea with deep roots in the history of philosophy For these reasons the author of this important study strives to clarify these philosophical and historical issues before proceeding to the details of the physical theory of geometrodynamics Information Processing

takes George Lakoff's dictum seriously that arguments about conclusions will be pointless unless there is agreement on the premises. Subscribing to the view that linguistic categorization is necessarily theory driven, it reconstructs and assesses on the basis of domain independent parameters derived from General Systems Theory and Leonard Talmy's Overlapping Systems Model of Cognitive Organization hegemonic western conceptualizations of modality. Arguing against such propositional models of modality, the book outlines, modifies and extends conceptualizations from a Cognitive Linguistics point of view, grounding modality especially on Talmy's Imaging System of Force Dynamics. The authors conceive of modality as an experientially and perceptually motivated radial category of Image Schemata, ultimately challenging the categorial status of modality as a cognitively motivated category.
