Archimedes' Principle I—continued

3. Assume the balloon is replaced by a 0.5-kilogram piece of wood that has exactly the same volume (1000 cm^3), as shown in Figure 2. The wood is held in the same submerged position beneath the surface of the water.

1000 cm^3

Figure 2

- What volume of water is displaced by the wood? _____
- What is the mass of the water displaced by the wood? _____
- What is the weight of the water displaced by the wood? _____
- How much buoyant force does the surrounding water exert on the wood? _____
- When the hand is removed, what is the net force on the wood? _____
- In which direction does the wood accelerate when released? _____

4. Repeat parts a through f in the previous question for a 5-kg rock that has the same volume (1000 cm^3), as shown in Figure 3. Assume the rock is suspended by a string in the container of water.

Teaching and Learning of Fluid Mechanics Ashwin Vaidya, 2020-12-02 This book contains research on the pedagogical aspects of fluid mechanics and includes case studies lesson plans articles on historical aspects of fluid mechanics and novel and interesting experiments and theoretical calculations that convey complex ideas in creative ways The current volume showcases the teaching practices of fluid dynamicists from different disciplines ranging from mathematics physics mechanical engineering and environmental engineering to chemical engineering The suitability of these articles ranges from early undergraduate to graduate level courses and can be read by faculty and students alike We hope this collection will encourage cross disciplinary pedagogical practices and give students a glimpse of the wide range of applications of fluid dynamics Water in Road Structures Andrew Dawson, 2008-10-21 Background This book is the most obvious outcome of the COST 351 WATMOVE project see www.watmove.org For most readers these terms probably mean little so some explanation is called for In 2001 2002 a small group led by Kent Gustafson of the Swedish Road and Traffic Institute VTI made a proposal to the European programme on Co operation in Science and Technology COST They proposed that a pan European team be set up to study the issue of Water Movements in Road Pavements and Embankments acronym WATMOVE The COST organisation agreed the proposal and the study formally began in December 2003 with the support of COST Due to ill health Kent was not able to lead the project and I was asked by the Management Committee to chair the project team

Scope of the Book This book is NOT about Water and Roads nor on Water on Roads There are other books which deal with surface water drainage in great detail and there are other source materials that deal with the impact of roads on water in the general environment To cover every aspect of the interaction between water and highways would have required a much greater effort and a much thicker book So this book seeks to limit itself to i Water inside the road construction and the underlying subgrade soils and rocks 1 ii Water from the surface down to the phreatic surface and iii Water in the road and ground between the fence lines of the highway
