**“The most practical and comprehensive guide to the Boeing 737 available today.”**

This book takes you right from the original concept that lead Boeing to design the 737 through its 50 year evolution, in language that is easily understood. It looks at each system in turn, supported by over 500 high resolution photographs, diagrams and schematics, placing each system component in context. It collates information from many different sources and combines over 20 years of the authors own flying experiences to lead the reader through the 737 from radome to tail-cone. This book takes you beyond the flight deck on a grand tour of the worlds' most prolific airliner in a way that is as relevant to the type rating candidate as it is to a company Fleet Technical Captain. To complete the picture, the book also contains Pilots notes, a detailed guide to airtesting and the accident history of the type, which serve to make this book the most practical and comprehensive technical guide to the 737 available today.

So, after ten years work, the website and all the supporting information that went into its' creation, is now available in print. If you have found the website useful but would like the bigger picture, go to [www.b737.org.uk](http://www.b737.org.uk) to order your copy.

lies in addition to the technological advancement of products and solutions in equally high safety requirements in particular taking into account the influence of human factor Thus it is of relevance to analyze an impact of human factor in the context of safety The matter is rather complex on the one hand humans manage technical systems on the other hand human errors negligence or evil intentions can turn the system into a threat with disastrous consequences However human interaction with any technical system begins earlier in the design stage In this stage designer being creator of the system must ensure a safe operation and take into consideration possible risks including those caused by human factors itself The book is interdisciplinary in nature and intended mainly for designers of technical systems aiming to assist the specialists in understanding the issues of human participation in life cycle of these systems The examples given are intended to benefit from experiences of not one but a number of industries
