★ THE NERVOUS SYSTEM

three functions of the nervous system:

sensory input: uses sensory receptors to monitor changes inside and outside the body

integration: processes and interprets sensory inputs and decides what to do

motor output: activates effector organs to cause a response

parts of the nervous system

central nervous system (CNS): brain, brain stem, and spinal cord

peripheral nervous system (PNS): cranial + peripheral nerves, and ganglia

parts of the peripheral nervous system

somatic nervous system: sensory and motor control

autonomic nervous system: involuntary control of organs and body functions

sub parts of the somatic nervous system:

sensory (afferent) division: conducts impulses to and from receptors - largely involved in sensation and special senses

motor (efferent) division: largely motor nerve fibers to control skeletal muscles

sub parts of the autonomic nervous system:

sympathetic nervous system (SANS or SNS): fight or flight

parasympathetic nervous system (PSNS or PNS): rest and digest

enteric nervous system (ENS): controls local digestive functions within the digestive system

structure of the nervous system: almost every tissue and organ is innervated

★ NERVOUS TISSUE

the cells of the nervous system

neurons: the main signal transmitter cells

glial cells or neuroglia: cells that protect neurons and clean up debris and waste (serve as immune cells)

neurotransmitters: chemicals that are released by the cells in the nervous system that act as messengers

neuroglia

-outnumber neurons

-have **branching processes** (extensions) and a **soma** (cell body)

-much smaller than neurons

-specialized based on their functions and locations (PNS and CNS)

1-central nervous systems

astrocytes (CNS)

- they have **end feet** that wrap around neurons and capillaries in the brain
- make up the **blood brain barrier (BBB)**

astrocytes control the chemical environment around neurons:

- mop up leaked ions
- recycle neurotransmitters

microglia (CNS)

- small cells with **oval shaped somas** (cell bodies)
- many processes that reach out to **monitor health of neurons**
- work with astrocytes to **protect neurons and monitor the BBB**
- can migrate when they sense damage or unhealthy neurons
