A Project Management Approach for Supply Chain Management to Sustain Growth and Performance at Suppliers Louis Jansen van Rensburg, 2013-09-12 Doctoral Thesis Dissertation from the year 2013 in the subject Business economics Supply Production Logistics grade A Atlantic International University Business School of Economics course Doctor of Project Management PhD language English abstract Supply chain especially procurement drives almost 70% of commodities daily in companies to sustain the performance for strategic intent. Working in an environment where teams function cross functional and also building relationships with suppliers performance normally give rise to high expectations both for the company contracting suppliers and the suppliers conducting various tasks contractually to fulfil demanding orders. Defence and contractual defence commodities in South Africa has decreased exponentially since 1980 till 1994 even so today that many suppliers have lost their skills and manufacturing ability to enter a market that is very risky today. Besides the normal performance measurement rating a supplier as an approved supplier the author argued with existing frameworks how little modern and well established companies know about their suppliers contributing to strategy. Taking the conceptual frameworks based on performance quality SRM Supplier Relationship Management and SOB Supplier Organisational Behaviour the author is of opinion that suppliers can be measured using organisational behaviour concepts to enhance performance at suppliers. The research will contribute new ideas developed by others as a concept to gain information about the behavioural patterns why key suppliers contributing for Company X cannot perform effectively and efficiently. By means of a survey targeting key suppliers the research formulated wanted to gain tacit information about the following elements that drives performance from a project management approach.

Supply Chain Management Khalid Zidan, 2016-05-25 FREE BONUS Included How to be a better leader Supply Chain Management The supply chain is not a new concept for economists The idea of the supply chain is a basic one that has permeated economic systems since the earliest days of trade and commerce It is simply a term referring to the collection of businesses or individuals responsible for transforming raw materials into products and then getting those products into the hands of consumers Though it may be obvious to some it is important to remember that supply chains exist whether or not they are managed it is a term that refers to the processes necessary to turn raw materials into a product and distribute them to customers The difference in the modern era is not that supply chains have been invented but that they have become a much more complicated proposition given the expansion of the international economy that s been made possible by the rise of the internet and globalization Whereas in the past businesses worked with mainly local or regional suppliers and factories the door is now opened for a company in the United States to own a factory in India and a warehouse in Japan all without having ever stepped foot outside their city The customer end of the supply chain has been similarly opened up Shopping on the internet allows anyone anywhere to find and buy from your company a double edged sword that lets you expand your reach even as a small business but also increases the competition presented by other small businesses everywhere in the world Chapters Chapter 1 Introduction to Supply Chains Chapter 2 Supply Chain Modeling Past and Present Chapter 3 Upstream Processes Chapter 4 Downstream Processes Chapter 5 Integrated Companies Chapter 6 Effective Supply Chain Management Bonus FREE How to be a better leader Bonus FREE 30 minutes call with me Supply Chain Management in the Hospital Industry of Switzerland Linda Schölkmann, 2015-06-02 Master s Thesis from the year 2011 in the subject Business economics Supply Production Logistics grade 1 6 King s College London course Supply Chain Management language English abstract This dissertation seeks to investigate how the Swiss hospital industry can face the upcoming budgeting restrictions set by the Swiss government Following an analysis of the political and economic environment of the industry the paper focuses on hospitals material management demonstrating that this is an area with substantial savings potentials At first the study examines the industrial approach of supply chain management SCM as a way

to realize those savings potentials reviewing the comprehensive secondary literature about SCM Findings from different authors who investigated the specifics of procurement in the hospital industry are compared and complemented with results from in depth interviews with four experts from the Swiss healthcare industry The comparison allows formulating how a SCM approach for hospitals should be customized to meet industry specific requirements Subsequently the dissertation designs a SCM model for hospitals that encompasses the business functions the corresponding organisational structure and the flow of key processes The drafted business framework is then compared with the findings of a case study research that investigates a Swiss hospital project This project has been awarded by an international organisation for logistics management and standardization as ground breaking for the Swiss hospital industry The comparison substantiates that the principles of the designed SCM model are widely consistent with the hospital s solution and helps to further customize the model Finally the strategic relevance of the drafted SCM approach for Swiss hospitals in general is evaluated It is demonstrated why the principles of the model are appropriate to help Swiss hospitals to eliminate their weaknesses in material management procedures and thus to achieve the necessary savings
