Transparency and Proportionality in the Schengen Information System and Border Control Co-Operation Stephen Kabera Karanja, 2008 This volume offers an evaluation of the Schengen Information System and border control co operation from a transparency and proportionality perspective It also incorporates a legal descriptive analysis of the co

operation in order to accommodate the changes and developments that occurred during the writing period The transparency and proportionality perspectives are developed from human rights and data protection criteria Transparency is understood as knowledge and accessibility to legal information as well as openness and accountability On the other hand proportionality is a requirement for guidance balance and justification as well as a need to avoid excessiveness and arbitrariness in border control work The final findings reveal that the Schengen co operation suffers from a deficiency of transparency and proportionality Consequently measures are proposed to augment the deficiency Even as this study was reaching its conclusion fundamental legislative changes closely similar to some of the arguments and recommendations projected in this study took place The efficacy of these changes is yet to be discerned Financial Accounting E7 Chapters 1-13
