

# PRINCIPLES OF DRAINAGE

- Drainage should be preferable laid by side of the building to facilitate easy repair and better maintenance.
- Sewer joints should be leak proof because leakage if any shall create an odor problem and leaked wastewater shall infiltrate in the ground and shall reduce bearing capacity of soil below foundation, which is not desirable.
- The sewage or sullage should flow under the force of gravity.
- The house sewer should always be straight.
- The entire system should be well ventilated from start to the end.
- The house sewer should be connected to the manhole such that the invert level is sufficiently higher to avoid back flow of sewage in house sewer.
- Where ever there is change in direction of sewer line in the premises, provide inspection chamber at the junction.
- Rain water from roofs or open courtyards should not be allowed to flow through the house sewers.
- Adequate ventilation systems should be installed.
