A beloved multidisciplinary treatise comes to Penguin Classics. Since its initial publication in 1958, *The Poetics of Space* has been a muse to philosophers, architects, writers, psychologists, critics, and readers alike. The rare work of irresistibly inviting philosophy, Bachelard's seminal work brims with quiet revelations and stirring mysterious imagery. This lyrical journey takes as its premise the emergence of the poetic image and finds an ideal metaphor in the intimate spaces of our homes. Guiding us through a stream of meditations on poetry, art, and the blooming of consciousness itself, Bachelard examines the domestic places that shape and hold our dreams and memories: Houses and rooms, cellars and attics, drawers, chests, and wardrobes, nests and shells, nooks and corners. No space is too vast or too small to be filled by our thoughts and our reveries. In Bachelard's enchanting spaces, we are never real historians but always near poets, and our emotion is perhaps nothing but an expression of a poetry that was lost. This new edition features a foreword by Mark Z. Danielewski, whose bestselling novel

House of Leaves drew inspiration from Bachelard's writings and an introduction by internationally renowned philosopher Richard Kearney who explains the book's enduring importance and its role within Bachelard's remarkable career. For more than sixty-five years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,500 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors as well as up-to-date translations by award-winning translators.

This third edition of Teaching Mathematics for the 21st Century continues to help teachers let the secret out to open up to their students the wonderful discoveries and challenges of the pattern-making and problem-solving aspects of a fascinating subject: mathematics. The rationale remains the same: to enable prospective and current teachers to access and use tools and strategies to effectively teach mathematics to contemporary students. Changing demographics, knowledge of how people

learn and technology all impact the way we educate our young people This edition incorporates lessons and strategies from programs that have proven success in many types of classrooms Many of these examples help students connect mathematics to real life situations and communicate their understanding of the underlying concepts Although technology is constantly being upgraded ways to increase student motivation through its application remains a goal For example since applets can enhance a lesson whether the teacher uses a computer projector a smart board or has students work individually on computers we have identified several sources of mathematics applets that can be correlated to various lessons Research citations and summaries have been updated to reflect current information on teaching and learning For future teachers
