

GENERAL

When diagnosing an engine problem, always perform a leak test. Refer to *ENGINE LEAK TEST*.

Always place the vehicle on level surface.

Always disconnect the negative wire from the battery before working on the engine.

During assembly/installation, use the torque values and service products as in the exploded view.

WARNING

Torque wrench tightening specifications must be strictly adhered to. Locking devices (e.g.: locking tabs, elastic stop nuts, cotter pins, etc.) must be replaced with new ones.

When disassembling parts that are duplicated in the engine, valves, springs, etc.), it is strongly recommended to note their position and to keep the parts of the same assembly as a "group".

If you find a defective component, it will be much easier to find the cause of the failure among its group of parts (for example, if you find a worn valve guide, a belt spring could be the cause; it will be easier to know which one of the springs is the cause and to replace it).

Besides, since parts are matched together, it is a good practice to re-install parts in the same position.

Intake port/filer contaminated (clogged) with dirt, sand, etc. leads to worn valves, piston rings and finally to loss of power.

NOTICE In case of piston-ring and/or valve replacement, always clean the whole engine and change the oil.
